

100G Optical Module Installation Plan

Overview

100G QSFP28 & SFP-DD Transceiver Module Installation Guide | FS This installation note provides instructions for installing FS Quad Small Form-factor Plugga.

Key Takeaways

100G optical modules, such as QSFP28 and SFP-DD, are hot-swappable devices that can be installed by carefully inserting them into compatible ports and connecting the appropriate fiber cables.

Step-by-

Step Installation 1. Verify Compatibility Before installation, ensure the optical module is compatible with your device and port type. QSFP28 modules typically use four lanes at 25 Gbps each, while SFP-DD modules may use two lanes at 50 Gbps.

Check that the module matches the wavelength and transmission distance requirements of the network link. 2.

Prepare the Device and Workspace

Power on the device if it supports hot-swapping; otherwise, power it down. Ensure a clean, static-free environment to prevent damage to the module or fiber connectors. Gather necessary tools, such as an ESD wrist strap and fiber cleaning supplies.

3.

Insert the Module

Align the module with the port slot. Gently slide the module into the port until it clicks into place. QSFP28 and SFP-DD modules are designed to be hot-swappable, so insertion can often be done while the device is powered on.

Avoid excessive force to prevent damage to the module or port. 4.

Connect Fiber Optic Cables

Use the correct fiber type (single-mode or multi-mode) and connector type (LC duplex for LR4 QSFP28, for example). Ensure the transmit (TX) and receive (RX) ends are correctly connected. Avoid bending the fiber cables sharply to prevent signal loss or damage.

5.

Verify Operation

Check the device's status indicators or management interface to confirm the module is recognized and operational. Use Digital Diagnostic Monitoring (DDM) if supported to monitor temperature, voltage, transmit/receive power, and laser bias current. 6.

Maintenance and Removal

To remove the module, gently press the release latch and pull the module straight out. Always cap the fiber connectors to prevent contamination when the module is not in use.

Additional Considerations

Follow manufacturer-specific guidelines for power consumption and breakout modes. Ensure the fiber length does not exceed the module's specified maximum distance. Handle modules by the edges and avoid touching the optical interface to prevent contamination.

By following these steps, 100G optical modules can be safely installed, ensuring reliable high-speed network connectivity.
