Comoro Aluminum Alloy Cable Tray

Overview

As Emit Metal, we are one of the leading manufacturers of metal cable trays, ladders, and trunking systems in Turkey since 2004. We have a monthly production capacity of over 1000 tons. Emit...

Key Takeaways

Comoro aluminum alloy cable trays are lightweight, corrosion-resistant, and available in ladder, perforated, and solid-bottom designs suitable for industrial, commercial, and coastal applications.

Overview

Aluminum alloy cable trays are designed to support and organize electrical and data cables while providing durability, corrosion resistance, and ease of installation. They are ideal for environments with high humidity, salt exposure, or chemical presence, making them suitable for coastal, industrial, and high-temperature areas. Aluminum trays are approximately half the weight of steel equivalents, offering easier handling and installation without compromising strength.

Common Models and Types

Ladder Cable Trays

Feature side rails with rungs for cable support. Suitable for long horizontal runs and heavy cable loads. Allow excellent ventilation, preventing cable overheating.

Perforated Cable Trays

Bottom has openings for airflow and drainage. Ideal for instrumentation and power cables in commercial and industrial settings. Provide moderate load support while maintaining cable temperature.

Solid-

Bottom Cable Trays

Continuous bottom without openings. Protect cables from dust, moisture, and electromagnetic interference. Often used for small-capacity or sensitive control/data cables.

Cable LaddersHeavy-duty variant of ladder trays. Designed for dense cable transitions and high load capacity. Lightweight aluminum construction ensures impact resistance and long-term durability.

Key Features

Corrosion Resistance: Aluminum alloy resists rust and chemical corrosion, suitable for harsh environments. Load Capacity: Designed to handle concentrated loads; some models support an additional 200 lb on any portion of the tray. Ease of Installation: Snap-in splice plates and reversible rungs allow top or bottom mounting of cable ties and clamps.

Ventilation: Openings in perforated trays allow airflow, reducing cable overheating. Compliance: Many aluminum trays follow NEMA VE1-1979 and IEC 61537 standards for cable tray systems.

Applications

Industrial plants, refineries, and power stations for heavy-duty cable management. Coastal and marine facilities due to high corrosion resistance. Commercial buildings and control rooms for data and instrumentation cables.

Environments requiring lightweight, durable, and flexible cable support systems. Comoro aluminum alloy cable trays combine lightweight design, high strength, and environmental durability, making them a versatile choice for a wide range of cable management applications.
