Custom Colors for Fiberglass Cable Trays

Overview

Explore fiberglass cable trays for telecom applications, including benefits, FRP vs steel, sizing, covers, resin selection and custom buying tips.

Key Takeaways

Fiberglass (FRP) cable trays are available in standard colors such as gray, beige, green, blue, yellow, and white, with custom colors available upon request.

Standard Colors

Gray: Typically associated with polyester resin trays, offering good general corrosion resistance. Beige: Often made with vinylester resin, providing enhanced resistance to acids and bases. Green: Commonly used in industrial applications for visibility and identification.

Blue and Yellow: Available for color-coding or specific project requirements. White: Sometimes used for cleanroom or laboratory environments.

Custom Colors

Many manufacturers offer custom color options to match specific project needs or corporate color schemes. This flexibility allows FRP cable trays to be integrated into environments where aesthetics or color-coded identification is important.

Considerations

The resin type (polyester, vinylester, or other FRP resins) can influence the final color and UV resistance. Some suppliers apply a surface veil during the pultrusion process to enhance corrosion resistance and provide a UV barrier, which may slightly affect the appearance. Color selection can also be used for service identification, helping maintenance teams quickly distinguish between different cable systems.

In summary, FRP cable trays offer a wide range of standard and customizable colors, allowing both functional and aesthetic flexibility for industrial, commercial, and specialized installations.
