Does Nokia make optical modules

Overview

Optical networks Leverage our suite of carrier-grade modular platforms to support a wide range of services and traffic Optical breakout solution for NokiaS.

Key Takeaways

Yes, Nokia manufactures optical modules, including transceivers and multi-rate modules for data center and telecommunications networks.

Nokia offers a broad portfolio of optical networking solutions, which includes coherent optical engines, pluggable optics, and intra-data center optics designed for high-capacity, low-latency, and power-efficient data transmission . Their optical modules are used in applications such as data center interconnects, metro networks, long-haul communications, and enterprise connectivity .

Types of Optical Modules

Nokia produces several types of optical modules:

• Optical transceivers: These combine a transmitter and receiver in a single module, supporting standards like SFP, SFP+, and QSFP+. They enable high-speed bidirectional data transmission over fiber and are compatible with various network devices .

• Multi-rate optical modules for OLTs: Nokia, in collaboration with Fabrinet, manufactures multi-rate modules suitable for Optical Line Terminals, which convert signals between light and electrical forms for broadband networks. These modules support speed upgrades and are being produced in the U.S. for programs like BEAD .

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

• Breakout modules: Part of Nokia's optical breakout solutions, these modules allow high-speed optical connectors to be split into lower-speed ports, improving interface density and bandwidth utilization in data center and IP networks .
Applications and Features

Nokia optical modules are designed for flexibility, scalability, and high performance. They support short reach (SR), long reach (LR), DR, FR, LR, and CWDM standards, and are compatible with both single-mode and multi-mode fibers . Features include hot-swappable designs, digital diagnostic monitoring, and wavelength division multiplexing (WDM) for efficient spectrum use . These modules are integrated into Nokia platforms such as the 7220, 7250, 7730, 7750, and 7950 series . In summary, Nokia not only manufactures optical modules but also provides a comprehensive ecosystem of optical networking solutions for telecommunications, data centers, and enterprise networks, supporting high-speed, scalable, and secure data transmission .
