Fiber Optic Cable Outer Sheath CMCC

Overview

6 Fiber Cable Outer Sheath Materials and How To Choose?

Because of the low density, good air permeability, excellent insulation and UV resistance of PE fibe.

Key Takeaways

CMCC fiber optic cables typically use outer sheaths made from materials like PE, HDPE, PVC, or LSZH, chosen for environmental protection, mechanical strength, and fire safety.Purpose of the Outer Sheath

The outer sheath of a fiber optic cable serves as the primary protective layer, shielding the optical fibers from mechanical damage, moisture, UV radiation, chemical corrosion, and temperature fluctuations. It also provides tensile strength and flexibility during installation and operation .

Common Sheath Materials
• Polyethylene (PE / HDPE): Often used for outdoor cables, PE is UV-resistant, chemically stable, and can withstand low temperatures. HDPE provides higher density and toughness, making it suitable for direct burial or exposed installations .

• Polyvinyl Chloride (PVC): Widely used for indoor or general-purpose cables, PVC offers good chemical resistance, weathering resistance, and low cost. However, it produces dense smoke when burned, which may be a concern in fire-sensitive environments .

• Low Smoke Zero Halogen (LSZH): Preferred for indoor or fire-sensitive areas, LSZH sheaths emit minimal smoke and no toxic gases during combustion. They also provide good tensile strength, oil resistance, and electrical insulation .

• Armored Sheaths: In areas prone to rodent damage or mechanical stress, cables may include metallic or corrugated steel tape armor beneath the outer sheath for extra protection .
Selection Considerations

When CMCC or other operators choose an outer sheath, they consider:

• Environmental Conditions: Outdoor exposure requires UV and moisture resistance (PE/HDPE), while indoor installations prioritize fire safety (LSZH).

• Mechanical Protection: Armored cables are used in high-risk areas, while non-armored cables suffice for protected conduits.

• Fire Performance: Sheath materials must meet fire ratings such as OFNP/OFCP (highest flame retardancy) or OFNR/OFCR (vertical riser applications) according to standards .

• Chemical and Industrial Resistance: PVC or TPE may be used in industrial environments for chemical and oil resistance .
Summary

CMCC fiber optic cables employ outer sheaths tailored to installation environments, balancing mechanical protection, UV and chemical resistance, and fire safety. Outdoor cables often use PE or HDPE, indoor cables use LSZH, and armored options are applied where extra mechanical protection is required. This ensures durability, safety, and long-term performance of the optical network.

6 Fiber Cable Outer Sheath Materials and How To Choose?

Because of the low density, good air permeability, excellent insulation and UV resistance of PE fiber cable outer

Fiber-Optic Cable Shrouds | McMaster-Carr

Choose from our selection of fiber-optic cable shrouds in a wide range of styles and sizes. Same and Next Day Delivery.

How To Choose Fiber Cable Outer Sheath Materials?

Choose the sheath material based on the specific environmental, mechanical, and safety requirements of your

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

6 Fiber Cable Outer Sheath Materials and How To

Because of the low density, good air permeability, excellent insulation and UV resistance of

Sheathing Types

If the fiber component will be installed in equipment and remain stationary, free from contact with foreign matter, a simple cotton or

The Importance And Selection Of Outer Sheath

Fiber optic cables are generally composed of fiber optic cores, cladding, coatings, reinforced

Fiber optic cable outer sheath material

Data center cables are intricate, converged, scattered, and extend to every part of the data center. Therefore, the

Fiber-optic cable

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but

Application Notes

Armored Versus Non-armored Cable Armoring increases the strength and robustness of a cable relative to its surroundings. The

Cable Jacket Material: How to Choose

Cable Jacket Material Comparison Both network cables and fiber optic cables have different cable jackets to choose

Indoor optical cable outer shestor material

Indoor fiber optic cables are an essential component of modern telecommunications infrastructure, providing fast and

What Is The Purpose Of The Outer Sheath In An Optical Fibre?

Fiber optic cable is normally covered with a substantial outer plastic sheath in order to reduce abrasion and to provide

18 Cable Sheath Materials Explained

Cable Sheath Materials - Complete Guide (Types, Characteristics & Applications) Whether

28 Selection_of_the_Correct_Optical_Cable
