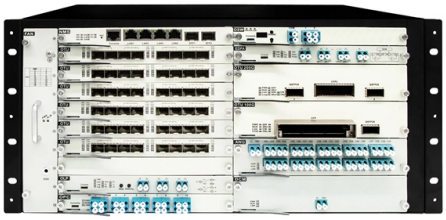
How much does an explosion-proof network cabinet cost



Overview

Shop durable network cabinets built from cold-rolled steel. Secure your IT and AV equipment with lockable glass doors and side panels.

Key Takeaways

Explosion-proof network cabinets typically range from $1,000 to over $10,000 depending on size, material, and certification.Price Ranges

The cost of an explosion-proof network cabinet varies widely based on several factors:

• Compact enclosures for small instruments or junction boxes generally start around $1,000 to $2,500. These are suitable for low-voltage terminations or confined-space installations and offer a balance of cost, strength, and corrosion resistance .

• Medium-sized cabinets for industrial automation or general-purpose wiring typically range from $3,000 to $6,000. These enclosures are reinforced for higher mechanical strength and corrosion resistance, making them suitable for chemical plants, offshore, or marine environments .

• Large or high-capacity cabinets designed to house motors, pumps, or complex network systems can exceed $10,000, especially when certified for ATEX Zone 1 or IECEx hazardous areas. Prices increase with physical size, amperage, and the number of internal components .
Factors Affecting Cost
• Material: Stainless steel, copper-free aluminum, or glass fiber-reinforced polyester (GRP) all influence price. Stainless steel offers superior corrosion resistance but is more expensive .

• Certification: ATEX, IECEx, UL, and NEC compliance adds cost due to testing, documentation, and quality audits .

• Size and Features: Larger enclosures require more material, thicker walls, additional fasteners, hinges, and gaskets. Features like cable entries, ventilation, or pressure-dissipating designs (e.g., EXpressure technology) also increase cost .

• Customization: Custom-fit cabinets for specific network equipment or cameras can further raise the price, especially if specialized hardware or internal mounting solutions are required .
Summary

For budgeting purposes, small explosion-proof network cabinets start around $1,000, medium industrial cabinets are $3,000–$6,000, and large, high-capacity or highly certified cabinets can exceed $10,000. Costs are influenced by material, certification, size, and customization, so selecting the right enclosure requires balancing safety requirements with budget constraints .
