Palestinian U-shaped cable tray specifications

Overview

Our perforated cable trays are more than just physical support systems for your cables. They promote air circulation, preventing overheating and ensuring optimal cable performance.

Key Takeaways

The Palestinian U-shaped cable tray is a durable, perforated channel tray designed to support and organize electrical cables efficiently while allowing ventilation and easy maintenance.

Design and Structure

The U-shaped cable tray, also known as a channel tray, features a simple U-shaped metal structure with a flat bottom and raised sides, often with center perforations and side collars for added strength and cable support. This design provides a compact and cost-effective solution for routing cables, particularly in tight or confined spaces, making it ideal for commercial, industrial, and residential installations.

Materials

These trays are manufactured using high-quality materials such as galvanized steel, stainless steel, mild steel, and fiberglass, depending on environmental conditions and project requirements. The materials are chosen for their corrosion resistance, strength, and durability, ensuring long-term performance even in harsh conditions.

Features and Advantages

Cable Protection: Safeguards cables from physical damage, dust, and environmental hazards. Ventilation: Perforations in the tray promote air circulation, preventing overheating and maintaining optimal cable performance. Ease of Installation: Lightweight yet strong, the trays are easy to install and maintain.

Space Optimization: Compact design allows efficient use of space in electrical rooms or industrial setups. Modular System: Can be combined with coupler plates or spice plates for extended runs and flexible routing. ApplicationsU-shaped cable trays in Palestine are widely used for power distribution, control, and communication cables in industries, commercial buildings, and IT installations.

They are particularly suitable for short cable runs, underfloor installations, and areas where larger trays cannot fit.

Maintenance and Safety

Regular cleaning is recommended to prevent dust accumulation, and proper bend radius should be maintained for sensitive cables like fiber optics. The trays comply with industry standards, ensuring safety and regulatory compliance. In summary, the Palestinian U-shaped cable tray is a versatile, durable, and cost-effective solution for organized cable management, offering protection, ventilation, and easy installation for a wide range of electrical applications.
