Are there any fiber optic cable factories in Mongolia

Overview

About us Expanding its cable trade, Moncable brand products made in the factory of Corning fiber, one of the largest fiber optic cable factories to be buil.

Key Takeaways

Mongolia does not currently have fiber optic cable factories; the country relies on imported cables for its telecommunications infrastructure. OverviewMongolia's fiber optic network is primarily built and maintained by local companies, but the cables themselves are imported. For example, Moncable Systems LLC distributes fiber optic cables manufactured by Corning in Shanghai, China, for use across various provinces in Mongolia, including Khuvsgul, Dundgobi, Uvs, and Umnogobi.

Other companies, such as Gemnet LLC and Netcom Mongolia LLC, operate extensive fiber optic networks but do not produce the cables domestically.

Fiber Optic Network Expansion

Local companies have been actively expanding Mongolia's fiber optic infrastructure.

Moncable Systems LL

C has installed hundreds of kilometers of fiber optic cables connecting multiple provinces.

Gemnet LL

C operates a 1,199 km DWDM network along the railway from the southern to the northern border of Mongolia, providing high-capacity telecommunications infrastructure.

Netcom Mongolia LLC and Bodi Electronics LL

C also contribute to network expansion and modernization projects using imported fiber optic cables.

Conclusion

While Mongolia has a growing and modern fiber optic network, all fiber optic cables are imported, and there are no known factories producing fiber optic cables within the country. Local companies focus on installation, network management, and distribution rather than manufacturing. This reliance on imports is common in countries where the domestic market for fiber optic cable production is not yet large enough to support local manufacturing.
