

Blocking Through-Wall Cable Trays in Taiwan

Overview

A simple and effective solution would be “Sleeve Systems.” where cable trays are stopped a few feet short of the fire barrier, a sleeve installed and the tray picked up again on the other side of the barrier.

Key Takeaways

Through-wall cable trays should be sealed with fire-rated materials and modular firestop systems to prevent fire and smoke spread while maintaining accessibility and mechanical integrity.

Firestopping Requirements

When cable trays pass through walls or floors, all openings must be tightly sealed using fire-rated materials such as firestop boards, firestop packs, firestop mastic, or fire-resistant mineral wool to prevent fire and smoke propagation. For large openings, a fire-resistant backing plate should be installed before sealing. Gaps between firestop packs and cables should not exceed 1 cm², and packing thickness should be at least 24 cm.

Cover plates should be square, evenly painted, and securely close the opening.

Material Options

Firestop Packs and Mineral Wool: Provide thermal insulation and fire resistance around cable trays. **Intumescent Caulks (e.g., IC 15WB):** Expand under heat to seal gaps and contain fire. **Modular Firestop Systems (e.g., FIRSTO):** Allow easy installation around multiple cables and trays, support mechanical loads, and enable future cable additions or removals.

3M Fire Barrier Moldable Putty+: Suitable for retrofitting or new construction, halogen-free, and compatible with various penetrations including metal pipes and conduits.

Installation Guidelines

Prepare the Opening: Ensure wall or floor finishes are complete and shaft doors installed. **Install Cable Tray:** Position trays according to layout plans, maintaining proper alignment and segregation of power and signal cables. **Apply Firestop Materials:** Place firestop packs or modular systems around the tray, ensuring no visible cracks or voids.

For slab penetrations, provide 20–30 mm of firestopping and a fire-support plate at the top. **Seal Gaps:** Use mastic or caulk to fill remaining gaps, ensuring complete internal and external sealing. **Final Inspection:** Verify tightness, mechanical stability, and compliance with fire safety standards.

Considerations for Taiwan

While Taiwan does not have a unique national standard for cable tray firestopping, international standards such as UL, NEMA, and EN directives are commonly referenced in local construction projects. Using certified firestop systems ensures compliance with safety regulations and facilitates inspections.

Summary

To effectively block through-wall cable trays in Taiwan: Use fire-rated boards, mineral wool, intumescent caulks, or modular systems. Ensure tight sealing with no visible gaps and proper backing plates for large openings. Maintain mechanical integrity and accessibility for future cable modifications.

Follow international fire safety standards to ensure compliance and reliability. This approach ensures both fire protection and operational flexibility for electrical installations.

Firestop

3M Fire Barrier Moldable Putty+ is a one-part, halogen-free product designed to firestop electrical outlet boxes and a wide variety of through-penetrations including cable, conduit, insulated pipe and metal

Firestopping Requirements for Cable Trays and

Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in

Cable Tray Penetrations: Problem Solved!

A simple and effective solution would be "Sleeve Systems." where cable trays are stopped a few feet short of the fire barrier, a sleeve installed and the tray picked up again on the other side of the barrier.

Fire rated wall | If

The sealing of vertical penetrations through fire separating constructions are especially important due to the chimney effect and must be carried out in the same way as for wall penetrations.

Guide to Fire-blocking Sections (Fire Sections/Fire

In the power industry, the installation of fire-blocking sections (fire-proof sections/fire-proof partitions) on cable trays is an important measure to

CABLE TRAY PENETRATION THROUGH FIRE RATED WALL

INSTALL BAGS PER MANUFACTURERS INSTRUCTIONS TO ACHIEVE UL CLASSIFIED FIRE RATING EQUAL TO OR GREATER THAN FIRE RATING OF WALL. SCHEDULE INSTALLATION

Firsto System | CSD Sealing Systems

FIRSTO is specifically suitable for the fire resistant ducting of cables and/or cable trays through wall and floor penetrations. No other firestop can offer the high level of security with the flexibility, time and

Technical Guidelines for Cable Tray Installation and

Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. This document

Cable Tray Penetrations: Problem Solved!

If a cable tray is rigidly routed through a fire barrier and an earthquake occurs, the seal will be broken and the firestop material will be dislodged. The result is that a fire will race through a wall that is

Fire Caulking Cable Trays/Walls | Information by Electrical ...

Our insurance company is requiring us to fire stop around cable trays where they penetrate walls. Most places look like it was never done in any manner and others look like it may

Taiwan CABLE TRAYS manufacturer

Conduit fittings used in electrical conduit system from the overhead service entrance to machinery, and apply to many areas such as construction site or metro transit system.

Technical Guidelines for Cable Tray Installation and

Use dedicated splice plates and bolts. Ensure firm electrical continuity through grounding jumpers at each connection point. Sharp edges or foreign debris

Wire Mesh Tray Technical Guide

The tray must be able to remain secured to the ceiling and keep both cable and structure from falling, which could block fire fighters' means of egress. Aluminum cable tray products cannot contain cables

Fire Protection of Cable Trays

Cable tray through fire rated wall The most common solution for the fire protection of cable trays penetrating walls is to wrap it with insulation on both

Understand the Importance of Cable Tray Fire Stopping

Cable trays can be a liability for fire prevention and containment, especially when they pass through walls, floors, and ceilings designed to resist fire. These designated fire-rated barriers are

Cable Tray Firewall Barriers Installation and Commissioning

This article is about Installation and Commissioning Cable Tray Firewall Barriers for commercial buildings, plants and refinery projects as per international codes and standards. This article explains

Why Your Building Needs Fire Stopping Around Cables

Fire stopping around cables. Learn about materials, methods and regulations to maintain fire integrity and protect your building's occupants.

Firestopping cable runs

Firestopping through concrete barriers, installing wall boxes and using cable trays are the most common problems in this area. Firestopping cable trays is particularly difficult because of the irregular size and
