Pipe and Cable Tray Sealing

Overview

Seal cable penetrations with our modular firestop solutions, designed to create water-, smoke- and gas-tight barriers in energy and industry projects both onshore and offshore.

Key Takeaways

Pipe and cable tray sealing systems protect penetrations against fire, water, gas, and environmental hazards while allowing flexible installation and future modifications.

Purpose and Importance

Sealing pipe and cable tray penetrations is critical for maintaining the structural integrity and safety of buildings and industrial installations. Unsealed penetrations can become weak points, allowing fire, gas, water, or smoke to spread, potentially causing damage or operational hazards. Proper sealing ensures compliance with fire safety standards and prevents costly retrofits or emergency repairs during future cable or pipe modifications (Roxtec, CSD, TST).

Types of Sealing Systems

Modular Sealing Systems: These systems, such as Roxtec and TST, use modular frames and inserts to accommodate multiple cables or pipes. They allow a “build as you grow” approach, enabling easy addition or replacement of cables without compromising the seal (Roxtec, TST). Firestop Seals: Designed to maintain fire-rated walls and floors, these seals use materials like mineral wool, fire-retardant coatings, or specialized sealants.

Systems like FIRSTO and PROMASTOP®-CC provide certified fire resistance according to standards like EN 1366-3 and UL 1479 (CSD, Promat). Weatherproof and Environmental Seals: Systems such as WSP weatherstops use galvanized or powder-coated steel frames with silicone-based pads to protect against water, dust, and corrosion, suitable for outdoor or harsh environments (CSD).

Self-

Compression and Pressure-Responsive Seals: Products like SLIPSIL and DYNATITE provide tight seals without bolts or metallic parts, automatically increasing tightness under pressure, ideal for gas or water-tight applications (CSD).

Installation Methods

Sealing frames can be cast, welded, bolted, or inserted into core-drilled holes in walls, floors, or ceilings. Modular inserts allow installation from either side of the penetration, and many systems are compatible with metal, plastic, or composite pipes and conduits (Roxtec, CSD). For cable trays, frames can encompass the entire tray or duct, simplifying maintenance and future cable changes (CSD).

Standards and Certification

Sealing systems are tested and certified to ensure fire, water, and gas resistance. Common standards include: EN 1366-3: Fire resistance for cable penetrationsEN 13501-2: Classification of fire performanceUL 1479: Firestop systems for penetrationsNEMA 4X: Weatherproof and corrosion-resistant enclosures (CSD, Roxtec) ApplicationsThese sealing systems are widely used in: Industrial plants, offshore platforms, and shipbuildingData centers, airports, and mechanical equipment roomsUnderground installations requiring water-tight sealsElectrical cabinets, control panels, and switchgear enclosures (Roxtec, TST, CSD) Key BenefitsSafety: Protects against fire, water, gas, and environmental hazardsFlexibility: Modular design allows easy cable or pipe additionsEfficiency: Reduces labor and installation timeCompliance: Meets international fire and safety standardsDurability: Resistant to corrosion, pressure, and harsh conditions In summary, pipe and cable tray sealing systems are essential for maintaining safety, operational reliability, and compliance in construction and industrial projects.

Modular and certified solutions provide flexibility, ease of installation, and protection against multiple hazards, making them a critical component in modern infrastructure design.

Cable transit frames and penetration sealing systems

Seal cable penetrations with our modular firestop solutions, designed to create water-, smoke- and gas-tight barriers in energy and industry projects both onshore and offshore.

Cable and pipe seals

You find roxtec cable and pipe seals in many applications throughout the construction industry. Discover the idea behind our innovative sealing solutions and learn how to apply roxtec for applications in your

CSD Sealing Systems: Weatherstops

WSP units accept any cable size and quantity. Our units install before or after tray and cable. Cable maintenance and changes are simple and easy — no additional parts are needed. Our units are

Cable and pipe seals

More than a firestop the roxtec sealing system for cables and pipes protects against fire – but also against gas, water, and several other risk factors. our solutions are easy to use and help you ensure

PDF document

power-cable-tray-factory | B2B companies and suppliers | europages

146 Companies and suppliers for power-cable-tray-factory Find wholesalers and contact them directly Leading B2B martketplace Find companies now!

Cable penetration seals according to European Standards

Cables, cable bundles, conduits, bundles of conduits, empty pipes, cable trays and cable ladders may also pass through penetration seals in walls

Pressure Exerting Sealant | Pyroplex | Fire resistance

Pyroplex Pressure Exerting Sealant expands multi-directionally when exposed to elevated temperatures, exerting pressure to seal and prevent the passage of fire

Cable Entry Seals for Sealing Protection | TE Connectivity

Protect against moisture with cable entry seals Our Raychem cable entry seals (CES) are water-tight, heat-shrinkable products providing long-term sealing for cable penetrations into panels, junction

Cable Tray Technical Guide A practical guide to product selection and ...

Cable Tray Technical Guide A practical guide to product selection and installation This guide for engineers and installers has been developed by ABB as a practical reference regarding cable tray

Trunking and cable tray protection

Our range of trunking and cable tray protection products provide effective fire protection for pipes, cables and trunking within floors, walls and ceilings.

Cable penetrations seals | Wolman

KBS ® offers various solutions to effectively protect cable penetrations from the passage of flames and smoke. In most cases, the task is to seal off complex cable systems and cables on support

Firestop

The following charts give the number of 3M pillows needed to completely firestop an opening that cable tray passes through.* Two (2) sticks of moldable putty (part number FSP-MPS) are also needed for

Firsto System | CSD Sealing Systems

FIRSTO firestops are designed to seal multi-cable and cable tray penetrations of fire-rated walls and floors. FIRSTO fire stops are developed as a modular system which is simple to assemble around
