Secondary distribution box mounted on the wall

Overview

Secondary unit substations design guide secondary unit substation is a close-coupled assembly consisting of enclosed primary high voltage equipment, three.

Key Takeaways

Yes, a secondary distribution box can be mounted on a wall, provided proper structural support, height, and safety standards are followed.

Feasibility and Applications

A secondary distribution box (SDB), which distributes power to specific areas or floors downstream from the main distribution board, can be installed on a wall. Wall-mounted SDBs are commonly used in homes, offices, and light industrial settings where floor space is limited and easy access is required . They are suitable for handling moderate loads and organizing cables neatly without cluttering the floor .

Installation Considerations
• Structural Support: Ensure the wall can support the weight of the SDB. Use appropriate fasteners such as expansion bolts or through-wall anchors for secure attachment .

• Height: For indoor installations, mount the box at 4.5 to 5.5 feet from the floor for easy access and safe operation. Outdoor boxes should be at least 3 feet above ground to avoid water and dirt exposure .

• Material and Protection: Wall-mounted boxes are typically made of steel, aluminum, or high-grade plastic, providing durability and protection against dust, moisture, and accidental contact .

• Cable Entry: Use pre-designed knockout points for cable entry to maintain a clean and organized setup .

• Safety Compliance: Follow local electrical codes and standards such as BS 7671 or IEC 60364-5-52 to ensure safe installation .
Advantages of Wall-Mounted SDBs
• Saves valuable floor space, especially in crowded areas or multi-floor buildings .

• Easier access for maintenance without bending or reaching low positions .

• Reduces risk of water damage and accidental contact compared to floor-mounted units .
Summary

A secondary distribution box can safely be mounted on a wall if the wall is structurally sound, the box is installed at an appropriate height, and proper fasteners and safety standards are used. Wall-mounted SDBs are ideal for indoor spaces with limited floor area, providing organized, accessible, and safe power distribution .
