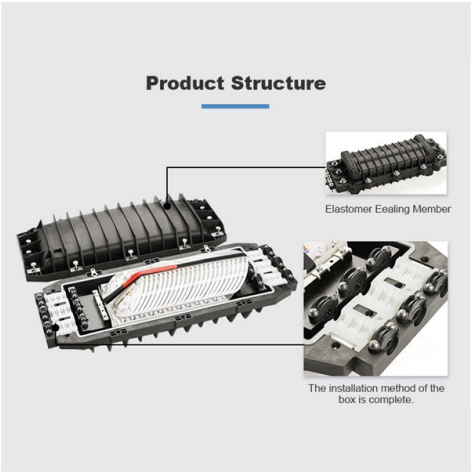
Solutions Modular Data Center High Density



Overview

Modular Data Center Solutions Using prefabricated, factory-tested components, we deliver high-performance data center capacity to any location, Prefabricat.

Key Takeaways

High-density modular data centers provide scalable, prefabricated infrastructure with advanced cooling and power systems to support AI, HPC, and next-generation workloads.Overview

High-density modular data centers are prefabricated, factory-tested solutions designed to deliver rapid deployment, predictable performance, and scalability for compute-intensive applications . These solutions are ideal for AI clusters, HPC environments, and hyperscale workloads where rack power densities can reach 1MW or more . Modular designs reduce onsite construction complexity, accelerate time-to-market, and ensure consistent quality through factory integration .

Key Features

1. Prefabricated Pod Architecture

• Modular pods are pre-engineered and pre-assembled, enabling rapid deployment with minimal site preparation .

• Supports high-density racks with flexible layouts for AI and HPC workloads.

• Can integrate hot aisle containment, InRow, and rear door heat exchanger cooling for efficient thermal management . 2. Advanced Cooling Solutions

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

• Liquid cooling systems, including in-rack and rear-door heat exchangers, manage extreme thermal loads .

• Optimized airflow and containment strategies reduce energy consumption while maintaining high performance . 3. Power Distribution and High-Density Racks

• High-power busways and NetShelter SX Advanced Racks support heavy server loads, cabling, and liquid cooling infrastructure .

• Updated Rack PDUs handle high-current requirements for AI servers, ensuring reliable power delivery .

• Modular power systems allow scalable expansion as compute demand grows . 4. Rapid Deployment and Scalability

• Factory-built modules reduce onsite labor and construction time by over 40% compared to traditional builds .

• Modular solutions can be deployed in remote locations, utility yards, or unconditioned warehouses .

• Expandable designs allow operators to scale compute capacity without overbuilding, maintaining cost efficiency . 5. AI and HPC Optimization

• Solutions are validated for AI-ready infrastructure, supporting NVIDIA MGX and other high-performance computing standards .

• Integrated designs address dynamic power profiles, extreme thermal loads, and operational efficiency, enabling predictable scaling .

Leading Providers

• Schneider Electric EcoStruxure Pod Data Centers: Prefabricated pods with liquid cooling, high-power busways, and AI-ready racks .

• Vertiv Modular Solutions: Flexible, plug-and-play modules with optimized cooling and energy efficiency .

• Edge Modular: Turnkey, high-performance prefabricated data centers for AI and HPC, deployable with minimal site prep .

• Compu Dynamics Modular (CDM): High-density, pre-integrated modules with advanced cooling, power distribution, and edge deployment capabilities .

Benefits

• Faster deployment: Factory-built modules reduce construction time and onsite complexity.

• Predictable performance: Pre-tested components ensure reliability and repeatable results.

• Scalability: Easily expand compute capacity as workloads grow.

© 2026 ALFA PRO COMMUNICATION SYSTEMS (Pty) Ltd - All rights reserved

• Energy efficiency: Advanced cooling and power distribution reduce operational costs.

• Flexibility: Can be deployed in diverse environments, including remote or constrained sites. High-density modular data centers are increasingly essential for organizations deploying AI, HPC, or hyperscale workloads, offering a future-ready, scalable, and efficient infrastructure solution that balances performance, energy efficiency, and rapid deployment .
