# Which port should the fiber optic network cable patch cord be plugged into

## Overview

Learn how to pick the right fiber optic patch cord or pigtail. Avoid installation errors. Based on 12+ years of field experience. Step-by-step guide with real examples.

## Key Takeaways

A fiber optic patch cord should be plugged into a port that matches both the connector type and the fiber mode of your equipment, such as an LC port on a switch or transceiver for LC connectors.

### Matching Connector Types

Fiber optic patch cords come with different connectors, the most common being LC, SC, and ST. The connector on your patch cord must match the port on your device or patch panel. For example, if your switch has LC ports, you must use a patch cord with LC connectors.

Using mismatched connectors (e.g., LC to SC without an adapter) will prevent proper connection and signal transmission.

### Single-

Mode vs.

### Multimode

Fiber patch cords are either single-mode (SM) or multimode (MM). Single-mode fibers are used for long-distance transmission, while multimode fibers are for shorter distances, such as within a data center. The patch cord must match the fiber type of the port; connecting a single-mode cord to a multimode port can cause severe signal loss or complete failure.

Transceivers and Duplex vs.

### Simplex

Many modern devices use transceivers (SFP/SFP+ modules) that accept specific connector types.

L

C connectors are commonly used with these transceivers. Patch cords can be simplex (single fiber) or duplex (two fibers). Duplex cords are often used for bidirectional communication, so ensure the cord orientation matches the transmit (TX) and receive (RX) ports on your devices.

### Practical Tips

Check the device documentation to identify the correct port type and fiber mode. Clean connectors before plugging in to avoid signal degradation. Avoid mixing connector types in the same zone to simplify future upgrades.

Use adapters only if necessary to connect different connector types. By following these guidelines, you ensure that your fiber optic patch cord is plugged into the correct port, maintaining optimal network performance and minimizing signal loss.
