

Classification of Fire Protection Distribution Boxes

Overview

Commodity Classifications in NFPA 13A Class II commodity is defined as a noncombustible product that is in slatted wooden crates, solid wood boxes, Hazardous.

Key Takeaways

Fire protection distribution boxes come in various types designed to ensure safe power distribution and maintain functionality during fire events.

Fire protection distribution boxes are specialized enclosures that house electrical circuits, protective devices, and fire alarm system components. They are constructed from fire-resistant materials and often include features like ceramic cubes, flame-retardant bushings, and powder-coated metal casings to ensure durability and safety under high temperatures. These boxes are essential in both residential and industrial fire safety systems, providing reliable power distribution and signal continuity during emergencies.

Main Types

- Standard Fire Protection Distribution Boxes
- Designed for general fire alarm and electrical distribution applications.
- Provide safe branching and connection of electrical and telecommunications cables.
- Often certified by national fire safety authorities (e.g., CNBOP-PIB) for compliance.
- Distribution Boxes with Fuses
- Include integrated fuses to protect circuits from overloads or short circuits.

- Commonly used in fire alarm systems to safeguard signaling devices like SA-K5, SA-K6, or SO-P8 .
- Junction Fire Protection Boxes
 - Serve as connection points for multiple cables.
 - Allow straight or angular (90-degree) cable routing.
 - Ensure continuity of electrical signals during fire events .
- Mantle and Door Fire Protection Enclosures
 - Wall-mounted or floor-standing enclosures with fire resistance ratings such as F30/F90, I30/I90, E30/E90.
 - Designed to maintain internal functionality and prevent fire spread for 30 to 90 minutes .
 - Include ventilation systems that automatically close in case of fire to protect internal components .
- Surface and Flush Mounted Boxes
 - Surface-mounted: Installed directly on walls, suitable for retrofits and industrial environments.
 - Flush-mounted: Embedded into walls for aesthetic integration in residential or commercial buildings .
- Specialized Fire Protection Boxes
 - Designed for integration with fire alarm systems, telecommunications, or anti-burglary systems.
 - Include ceramic cubes to maintain electrical flow under extreme conditions.
 - Some models allow direct installation of signaling devices on the cover for convenience .

Key Features

- Fire Resistance: Rated according to standards like DIN 4102, ensuring protection for 30-90 minutes.
- Durable Materials: Powder-coated sheet metal, flame-retardant bushings, and ceramic components.
- Versatility: Suitable for residential, commercial, and industrial applications.
- Compliance: Certified by national authorities to meet fire safety regulations .

Applications

- Fire alarm systems (FAS)
- Electrical power distribution in high-risk areas

- Industrial automation and control systems
- Telecommunications and security installations Fire protection distribution boxes are critical for maintaining safety, functionality, and compliance in electrical and fire protection systems. Selecting the right type depends on the application, required fire resistance, and integration with signaling or control devices .
