# Concrete type for distribution box foundation

## Overview

A box foundation is a load-bearing foundation, usually made of reinforced concrete, with a box-shaped cross-section. It is used when large vertical loads, horizontal forces and moments must be safely transferred into the subsoil while deformations, settlements and vibrations are to be limited. The hydraulic involved in distribution box is presented in Doc n° MF4-S40 “Crest flow in distribution box” All the details can be found in the drawing Drawing n° MF4-D43: Example: Find details about the DB in the sketch map of the network: Number and diameters of outlets are written inside the DB. 1. CONCRETE: 4,000 PSI MINIMUM AFTER 28 DAYS. TITLE 5 REGS, FOR DISTRIBUTION BOXES. DESIGN CONFORMS WITH 310 CMR 15. DESIGNED FOR AASHTO HS-20 LOADING, COVER(2) 4 1/2 DIA INLETS(13) 4 1/2 DIA OUTLETS4318 DIA CLEANOUT1 TO 5 FEET. COVER WEIGHT 463#Specifications subject to change without. A concrete foundation is a structural element made of concrete (often with reinforcement) used to transfer a building's loads safely into the subsoil. Depending on use, subsoil, and actions, pad foundations. Data Centers play a critical role in modern digital infrastructure, supporting the rapid expansion of cloud computing, AI technologies, and global data storage.
