

Dual power distribution box PC

Overview

These devices are designed to offer seamless power distribution to multiple systems while enhancing flexibility and reducing downtime. This setup minimizes downtime risks and enhances fault tolerance. For instance, dual feed PDU s automatically switch from the primary to the secondary source during failures. Designed for datacenters and other electrically demanding applications, CyberPower Switched Auto Transfer Switch (ATS) PDUs, distribute unfiltered electrical pass-through to receptacles from redundant plugs. Outlets can be controlled remotely or locally, as well as individually or collectively. PDUs deliver AC power from an uninterruptible power supply (UPS), a generator, or utility power source to servers, network/telecom equipment, and other devices.
