

Electrical distribution box installed in the hallway at the entrance

Overview

(A) Entrance. At least 1 entrance to enclosures for electrical installations as described in 110.31 not less than 30 in.

Key Takeaways

A distribution box in a hallway near the entrance is acceptable if it meets clearance, height, and accessibility requirements per electrical codes.

Location and Accessibility

Electrical panels, also known as distribution boxes or breaker boxes, can be located in various areas of a home, including hallways near entrances, provided they comply with safety and code requirements. While basements, garages, or utility rooms are often preferred, hallways are commonly used for easy access, especially in older homes. The key is that the panel must be readily accessible and not obstructed by furniture or doors.

Clearance and Height Requirements

According to the National Electrical Code (NEC), the following requirements apply:
Front workspace clearance: At least 3 feet of clear space in front of the panel to allow safe operation and maintenance. Width clearance: Minimum 30 inches wide working space around the panel. Panel door: Must be able to open to a 90-degree angle.

Height: The highest circuit breaker handle should not exceed 6 feet 7 inches above the finished floor. These requirements ensure that anyone accessing the panel can do so safely and efficiently.

Safety Considerations

Avoid hazardous locations: Panels should not be installed in bathrooms, clothes closets, over stairways, or near easily ignitable materials. Dry and ventilated area: Hallways are generally suitable if they remain dry and well-ventilated. Labeling and organization: Each circuit should be clearly labeled, and wiring should be neat with proper grounding and breaker sizing.

Summary

A distribution box in a hallway near the entrance is permissible as long as it meets NEC clearance, height, and accessibility standards, and is installed in a safe, dry location. Regular inspections and proper labeling further enhance safety and compliance.
