

External power supply for optical module

Overview

MPM38222 – A Simple, Compact Power Solution for This article introduces the MPM38222, a high-performance, 6V input, dual 2A power module, which is suitable.

Key Takeaways

External power supplies for optical modules provide compact, efficient, and reliable DC power to drive lasers, photodetectors, and associated circuitry in high-speed optical communication systems.

Overview

Optical modules, such as SFP, QSFP, and co-packaged optics (CPO) systems, convert electrical signals to optical signals and vice versa. They require precise, low-noise, and thermally stable power to operate components like laser diodes, photodiodes, and driver circuits. External power supplies are often used to meet these requirements while maintaining compact form factors and high efficiency.
