A distribution box, also known as a distribution board or panel, is the central unit that distributes incoming electrical power to various circuits. Each outgoing line can be individually. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. Today, electrical systems are essential for homes and industries. Power Distribution Equipment is a term generally used to describe any apparatus used for the generation, transmission, distribution, or control of electrical energy.
