

Fiber Optic Coupler Small Square Head

Overview

ST Fiber Optic Couplers for Extending STUPC Single Mode Cables - Our STUPC Fiber Connectors are pre-Cleaned Barrel Connectors.

Key Takeaways

A "small square head" fiber optic coupler typically refers to an LC (Lucent Connector) type connector, designed for high-density fiber optic connections.

The LC connector is a miniaturized fiber optic connector with a small square head and a 1.25mm ferrule, which is half the size of the older SC connector's 2.5mm ferrule . It uses a latch mechanism similar to an RJ45 plug, allowing secure, plug-and-play connections without rotation, making it ideal for high-density applications in data centers and network equipment .

Key Features

- Form Factor: Small square head, compact design for tight spaces.
- Ferrule Size: 1.25mm, ensuring precise alignment of fiber cores for minimal insertion loss.
- Coupling Mechanism: Latch-type, easy to connect and disconnect.
- Applications: Commonly used with SPF, QSFP, and CFP2 optical modules, as well as high-density patch panels .

- Advantages: High installation density, low insertion loss, reliable performance, and compatibility with modern high-speed networks .

Comparison with Other Connectors

- SC Connector: Larger square head, 2.5mm ferrule, push-pull mechanism, suitable for standard-density applications .

- LC Connector: Smaller square head, 1.25mm ferrule, latch mechanism, optimized for high-density setups .

Usage Notes

LC connectors are widely used in fiber optic couplers, patch cords, and transceivers where space is limited and high port density is required. They are compatible with single-mode and multimode fibers and are preferred in modern 10G, 40G, and 100G networks due to their compact size and reliable performance . In summary, a small square head fiber optic coupler refers to an LC-type connector, offering compact, high-density, and efficient fiber connections suitable for modern networking and data center environments .
