

Fiber Optic OEM3

Overview

Multimode Fiber Types: OM1 vs OM2 vs OM3 vs OM4 Identified by ISO 11801 standard, multimode fiber optic cables can be classified into OM1 fiber, OM2 fiber.

Key Takeaways

OM3 fiber optic cables are high-performance multimode fibers designed for OEM applications, supporting 10G/40G Ethernet and data center connectivity with customizable options. What is OM3 Fiber? OM3 is a multimode fiber (MMF) optimized for high-speed data transmission over short to medium distances.

It is commonly used in enterprise LANs, data centers, and OEM equipment. OM3 fibers are laser-optimized, allowing 10 Gigabit Ethernet up to 300 meters and 40/100 Gigabit Ethernet up to 100 meters. Compared to OM1 and OM2, OM3 provides higher bandwidth and lower modal dispersion, making it suitable for modern high-density networks (GETEKnet).

OE

M Applications OM3 fiber is widely used in OEM solutions, where manufacturers integrate fiber optic components into equipment or systems.

OE

M applications include: Data centers: High-speed interconnects for servers, switches, and storage arrays
Telecommunications: Backbone and horizontal cabling
Industrial networks: Harsh environment deployments with armored or specialized jackets
Custom equipment: OEM devices requiring precise fiber lengths, connectors, and performance specifications (Corning) Customization and Options
OEM fiber optic cables, including OM3, can be fully customized to meet client requirements: Cable length: Standard or extended lengths (e.g., 30 meters)
Connector types: LC, SC, MPO, or custom connectors
Jacket materials: LSZH, TPU, or armored for environmental protection
Core counts: Single or multiple cores depending on application
Branding and labeling: OEM-specific markings for integration (FiberMania) Comparison with Other Multimode Fibers
OM4: Higher bandwidth than OM3, supports longer distances for 40/100G Ethernet
OM5: Optimized for short wavelength division multiplexing (SWDM), future-proof for high-density data centers
OM3 remains cost-effective for current 10G/40G networks and legacy systems (GETEKnet) Key Considerations for OEM Integration
Ensure insertion loss and return loss meet international standards
Select fiber type based on distance, speed, and future upgrade plans
Choose connectors and jacket types suitable for the operating environment
Work with trusted OEM suppliers like Corning, FiberMania, or GETEKnet for quality assurance and technical support
OM3 fiber optic cables provide a reliable, high-speed, and customizable solution for OEM applications, balancing performance, cost, and compatibility with existing network infrastructure.
