

Fiber optic patch cords FC and UPC

Overview

Fiber Patch Cord & Pigtail: Complete Selection Guide 2026 | OPELINK This article is a selection guide for Fiber patch cords and pigtails, which systematical.

Key Takeaways

FC/UPC fiber optic patch cords are single-mode or multi-mode cables with FC connectors and Ultra-Polish (UPC) end faces, offering reliable connections with moderate return loss suitable for most telecom and data applications. Overview of FC Connectors

The FC (Ferrule Connector) is a screw-on type fiber optic connector designed for precise alignment and secure connections, commonly used in telecommunications, measurement equipment, and high-vibration environments. Its threaded mechanism ensures a stable connection, reducing the risk of accidental disconnection and maintaining consistent optical performance .

UPC Polish Characteristics

UPC (Ultra-Polish Connector) refers to the polishing style of the fiber end face, which is flat with a slight curvature to minimize back reflection. UPC connectors typically provide a return loss of around 55 dB minimum, making them suitable for applications where moderate signal fidelity is sufficient, such as data centers, LANs, and general telecom networks . Compared to APC (Angled Physical Contact) connectors, UPC has higher return loss but is more cost-effective and easier to handle in standard installations .

Fiber Types and Performance

FC/UPC patch cords are available in single-mode (SM) and multi-mode (MM) fibers. Single-mode fibers, with a 9 µm core, are ideal for long-distance transmission and high-bandwidth applications, while multi-mode fibers, with 50 or 62.5 µm cores, are better suited for shorter distances like data centers or campus networks . Typical insertion loss for single-mode FC/UPC cords is 0.15 dB, and multi-mode is around 0.10 dB, ensuring efficient signal transmission .

Applications

- Telecommunications networks
- Fiber-to-the-home (FTTH) systems
- Data centers and enterprise backbones
- Test and measurement equipment FC/UPC patch cords are available in standard lengths up to 50 meters, with custom lengths on request, and can handle operating temperatures from -20°C to +60°C. They are packaged individually with performance metrics to ensure quality and reliability .

Summary

FC/UPC fiber optic patch cords combine the secure screw-on FC connector with the Ultra-Polish end face, providing a balance of low insertion loss, moderate return loss, and cost-effectiveness. They are ideal for most standard networking and telecom applications where high precision is not critical, while APC connectors are preferred for low return loss and high-fidelity requirements .
