

Fiber optic transceiver connected to a Layer 3 switch

Overview

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. Download the Application PDF SFP. Fiber optic cabling is increasingly used to connect network switches and other datacom equipment, especially in long-distance and mission-critical applications. Fiber provides: Increased internet signal bandwidth. Cisco SFP+ modules offer the following features and benefits. ● Industry's smallest 10G. This document describes how to troubleshoot fiber optic interfaces by addressing some of the fiber optic module and cabling specifications.
