

Fiji OTN Router 10G

Overview

It supports downstream bandwidths of up to 10 Gbps and upstream bandwidths of 10 Gbps, enabling fast and reliable data transmission.

Key Takeaways

A Fiji 10G OTN router is a high-speed optical transport device supporting 10 Gbps connectivity for multi-service networks, ideal for enterprise, metro, and fiber-to-the-premises deployments. Key Features and Capabilities

High-Speed Optical Connectivity: Fiji 10G OTN routers support 10 Gbps symmetrical data rates, enabling high-bandwidth services for residential, business, and industrial applications. Devices like Cisco 10G Routed PON ONTs integrate XGS-PON optics, MAC, and Ethernet switching to deliver reliable 10G downstream and upstream connectivity via SC/APC optical connectors, ensuring compatibility with current and future network demands.

Multi-

Service Support: Platforms such as Huawei OptiX OSN 1800 provide multi-service OTN capabilities, supporting TDM, packet, and OTN services over metro or campus networks. They can transport high-bandwidth applications including video, industrial automation, SANs, and data center traffic, with low latency and resilient performance.

Standards Compliance: These routers comply with ITU-T G.

9807. 1 for XGS-PON and G. 709 for OTN framing, ensuring interoperability with various Optical Line Terminals (OLTs) and network equipment.

Advanced FE

C (Forward Error Correction) like RS-FEC, EFEC, and UFEC improves optical link performance and extends reach. Deployment Flexibility: Fiji 10G OTN routers can be deployed in diverse environments, including residential MDUs, SOHO, SMB/SME, and enterprise networks. They support both fiber and copper interfaces, reducing edge transport and routing costs while minimizing footprint and power consumption.

Network Optimization: Integrated routing and switching capabilities allow operators to optimize Total Cost of Ownership (TCO) by consolidating transport, switching, and routing functions.

OT

N features like Automatic Switched Optical Network (ASON) provide protection against fiber cuts and ensure service continuity. Example Use Cases Fiber-to-the-Premises (FTTP): Delivering 10G internet to homes and businesses using XGS-PON ONTs. Enterprise and Data Centers: High-capacity transport for SANs, video, and cloud services.

Metro Networks: Multi-service transport with low latency for industrial automation and video streaming. Carrier Networks: Integration with DWDM and packet optical systems for scalable, high-speed backbone connectivity.

Summary

Fiji 10G OTN routers combine high-speed 10G optical transport, multi-service support, standards compliance, and deployment flexibility, making them suitable for modern broadband, enterprise, and metro networks. They enable operators to deliver reliable, low-latency, and high-bandwidth services while optimizing network costs and scalability.
