

Fluke Supported Optical Modules

Overview

Download user manuals, getting started guides, quick reference guides, and safety information for Fluke Networks products.

Key Takeaways

Fluke supports a range of optical modules for fiber testing, including singlemode, multimode, and quad add-on kits compatible with CertiFiber Pro and SimpliFiber Pro systems. CertiFiber Pro Optical Modules

Fluke's CertiFiber Pro Optical Loss Test Set (OLTS) supports both singlemode and multimode fiber testing, providing fast certification of two fibers at two wavelengths in under three seconds. The system uses the Taptive user interface, which simplifies setup, eliminates errors, and speeds troubleshooting. Modules include:

- CFP-SM-ADD Singlemode Add-On Kit: Designed for singlemode fiber testing, this module integrates with the CertiFiber Pro platform to provide Tier 1 (basic) and Tier 2 (extended) testing and reporting when paired with the OptiFiber Pro module.
 - CFP-Q-ADD Quad Module: Supports both singlemode and multimode fibers, compliant with multimode Encircled Flux standards, allowing versatile testing in mixed fiber environments. These modules enable double-ended fiber inspection, allowing automated PASS/FAIL certification of connector end-faces at both ends of a fiber link in less than a second, reducing errors and improving efficiency. They are compatible with LinkWare Management Software and Linkware Live, which provide real-time access to test results, job tracking, and consolidated reporting.
- SimpliFiber Pro Modules

The SimpliFiber Pro Optical Power Meter and Fiber Test Kits are designed for first-line fiber verification and troubleshooting. These modules support dual-wavelength testing, automatic wavelength detection, and advanced features like CheckActive™, FindFiber™, and Min/Max measurements. They are ideal for measuring optical loss, power levels, and inspecting connector end-faces, making them suitable for both basic and advanced fiber testing needs.

Key Features Across Fluke Optical Modules

- **Ease of Use:** Touchscreen interfaces and animated guidance reduce setup errors.
- **Compatibility:** Modules integrate with Fluke's Versiv platform and software for comprehensive reporting.
- **Efficiency:** Fast testing speeds and automated inspection streamline fiber certification.
- **Versatility:** Support for singlemode, multimode, and quad configurations allows testing across diverse fiber networks. Fluke's optical modules are widely used in professional fiber optic testing, providing reliable, accurate, and efficient solutions for both installation and maintenance of fiber networks.
