

High-efficiency UPS system 10kW for FTTH use

Overview

SRT10KXLI This APC Smart-UPS is designed for IT professionals or network administrators to maintain business uptime and continuity. This SRT10KRMXLT This 1.

Key Takeaways

For FTTH applications, a 10kW UPS system like the Schneider Galaxy VS, CyberPower HSTP3T10K, or Eaton SmartOnline provides high efficiency, reliable power backup, and seamless protection for ONTs, routers, and network equipment. Key Considerations for FTTH UPS Deployment

1. **Efficiency and Energy Savings** High-efficiency UPS systems reduce energy losses and operational costs. For example, the Galaxy VS 10kW UPS achieves up to 99% efficiency in EConversion mode, significantly lowering energy consumption compared to standard UPS systems operating at 97% efficiency . Similarly, the CyberPower HSTP3T10K reaches 98% efficiency in Economy Mode, reducing heat dissipation and idle power usage . High efficiency is critical in FTTH deployments to minimize electricity costs across multiple subscriber sites.

2. **Continuous Power and Zero Transfer Time** FTTH networks require uninterrupted power to ONTs and routers. UPS systems like the Eaton SmartOnline SU10000RT3UTAA provide true online double-conversion with zero transfer time, ensuring connected devices remain operational during outages . Mini UPS solutions for FTTH also offer instant automatic switchover (0ms), preventing service interruptions and maintaining PPPoE sessions .

3. **Compact and Modular Design** Space efficiency is important in telecom closets or edge cabinets. Many 10kW UPS systems, such as the Atlas online series, feature rack/tower form factors with front-accessible internal batteries for easy maintenance . Mini UPS units for FTTH are wall-mountable or hidden in structured media panels, saving space while providing stable DC output .

4. **Battery Backup and Expandability** For extended outages, UPS systems support internal and optional external battery packs. The Eaton SmartOnline UPS, for instance, allows expandable runtime with hot-swappable external batteries, ensuring continuous operation for critical network equipment . CyberPower and Schneider models also support parallel expansion for higher capacity or redundancy .

5. **Voltage Stability and DC Output** FTTH devices are sensitive to voltage fluctuations. Mini UPS solutions provide stable DC output (9V or 12V), acting as high-precision stabilizers to protect ONTs and routers from grid voltage sags . This is particularly important in regions with aging infrastructure or frequent micro-outages.

6. **Remote Monitoring and Management** Modern UPS systems, such as the Galaxy VS, are EcoStruxure-ready, enabling cloud-based monitoring and management via smartphones, which is useful for ISPs managing distributed FTTH networks .

Recommended Options for FTTH

- Schneider Galaxy VS 10kW, 208V 3-phase: Up to 99% efficiency, modular, EcoStruxure-enabled, suitable for edge and small data centers .
 - CyberPower HSTP3T10K 3-phase online UPS: High efficiency (98%), parallel expansion, intelligent DSP control, ideal for critical telecom infrastructure .
 - Eaton SmartOnline SU10000RT3UTAA: True double-conversion, zero transfer time, expandable battery runtime, TAA-compliant, suitable for mission-critical FTTH equipment .
 - Mini UPS for ONT/Router Backup: Compact, DC-to-DC efficiency 90–95%, instant switchover, wall-mountable, ideal for distributed subscriber-side FTTH deployments .
- Conclusion

For FTTH networks, selecting a high-efficiency 10kW UPS ensures continuous service, energy savings, and protection of sensitive network devices. Depending on deployment scale, ISPs can choose between full-scale 3-phase UPS systems for central offices or mini UPS units for subscriber-side edge devices, combining reliability, compactness, and efficient power management.
