

How much does an optical module chip socket cost

Overview

An optical module is a typically hot-pluggable optical transceiver used in high-bandwidth data communications applications.

Key Takeaways

The cost of an optical module chip socket typically ranges from \$5 to \$50 per unit, depending on speed, material, and supplier.

- **Module Speed and Performance** Optical module sockets for higher-speed modules (e.g., 400G or 800G) are more expensive due to tighter tolerances, higher signal integrity requirements, and advanced thermal management. Lower-speed modules like 25G or 100G generally use simpler PCB or ceramic substrates, which are less costly.

- **Material Type**

- **Ceramic substrates:** Offer excellent thermal stability and electrical insulation, suitable for high-power or coherent optical modules; these are on the higher end of the price range.

- **Organic laminates / PCB substrates:** Lightweight, cost-effective, and suitable for short-reach modules; these are generally cheaper.

- **Metal-core or copper-molybdenum substrates:** Optimized for thermal dissipation in dense module designs, moderately priced.

- **Supplier and Brand** Leading suppliers like Nanya PCB, Unimicron, Ibiden, and AT&S provide high-quality, high-speed sockets with low insertion loss and high thermal performance, which can increase cost . OEMs may charge a premium for reliability, certification, and support.
- **Production Complexity** Precision manufacturing in cleanroom environments, multi-layer PCB designs, and co-packaged optics integration add to the cost . Modules with advanced features like PAM4 IC support or multi-terabit data center compatibility are more expensive.
- **Market Dynamics** Supply chain constraints, semiconductor material shortages, and demand surges for hyperscale data centers or 5G infrastructure can temporarily increase prices . Conversely, mature standards and high-volume production can reduce costs over time.

Summary

For budgeting purposes, low-speed optical module chip sockets (25G-100G) typically cost \$5-\$15 per unit, while high-speed sockets (400G-800G) can range from \$20-\$50 per unit. Prices may vary based on material, supplier, and module specifications, and additional costs may arise from logistics, R&D, and integration requirements .
