

How to add a cable tray in CAD

Overview

To Draw a Cable Tray or Conduit Run In the Cable Tray Layout Preferences dialog box on the Routing tab, select Automatically create riser at new Elevation.

Key Takeaways

To create a cable tray in AutoCAD, use the Electrical workspace tools to draw and configure cable trays according to your project specifications. Steps to Create a Cable Tray in AutoCAD Open the Electrical Workspace: Start by launching AutoCAD and switching to the Electrical workspace. This will provide you with the necessary tools for cable tray design.

Access Cable Tray Tools: Click on the Home tab, then navigate to the Build panel. Here, you will find the option for Cable Tray. Select it to begin the process of drawing your cable tray.

Define Cable Tray Parameters: Use the Properties palette to set the parameters for your cable tray, such as type, size, and elevation. You can also access the Add Cable Trays dialog box for more specific settings. Specify the desired elevation and offsets relative to other objects in your drawing.

This ensures that the cable tray is positioned correctly within your layout. Draw the Cable Tray: Click in the drawing area to place the cable tray. You can extend the tray as needed by using grips to add segments or adjust the layout.

Ensure that the tray follows the required routing paths for your project. Utilize Routing Capabilities: If you need to create riser sections or change elevations, use the routing capabilities within AutoCAD to modify the tray as necessary. This allows for flexibility in your design.

Final Adjustments: After placing the cable tray, review the design for any necessary adjustments. You can modify the properties or add fittings as required for your specific installation needs.
