

How to connect the fiber optic switch cable to the optical loss meter

Overview

Connect the jumper cables to ports on the patch panel. An optical power meter measures the strength of light traveling through a fiber optic cable, giving you a reading in dBm (decibels relative to one milliwatt). This guide will explain how to use an optical power meter effectively for network installation, troubleshooting, and performance checks. Just go to the topics below to find the information you. Supplies: Reference cable, test source and power meter Connect the test cable to the reference cable Connect the test source to the transmitting end of the test cable Connect the power meter to the receiving end of the reference cable Using the test source, send a light signal into the test cable. This guide provides instructions for an experienced technician to begin using the Extron Fiber Optic Power Meter (FPM 101) and Light Source (FLS 101). Every testing kit has different.
