

How to find the IP address of an industrial switch

Overview

Assuming the switch has had its IP configured on the subnet your test computer is on, run a subnet scan with an IP scanner and look for its MAC address.

Key Takeaways

To find the IP address of a switch on an industrial network, you can use network scanning tools, check MAC address tables, or access the switch's management interface directly.

Methods to Find the IP Address

Use Network Scanning Tools: Nmap: You can perform a subnet scan using Nmap to discover devices on your network. For example, run the command `sudo nmap -sn 192.168.x.`

`0/24`, replacing `192.168.x` with your subnet. This will list all devices, including switches, and their IP addresses.

Angry I

P Scanner: This tool can scan your network and display connected devices, including switches, if they are on the same subnet.

Check MA

C Address Tables: If you have access to a router or another switch, you can use the command `show arp` to find the MAC addresses of connected devices. Then, use the MAC address to look up the corresponding IP address in the switch's MAC address table. For Cisco switches, you can connect via console or SSH and use the command `show mac address-table` to see which MAC addresses are associated with which ports.

Direct Console Access: If you have physical access to the switch, connect to its console port using a console cable and a terminal emulator (like PuTTY). Once connected, enter privileged EXEC mode and use the command `show ip interface brief` to display the IP addresses configured on the switch. Using CDP/LLDP: If you have another Cisco device on the same network, you can use Cisco Discovery Protocol (CDP) or Link Layer Discovery Protocol (LLDP) to discover the IP address of the switch.

This can provide information about the switch and its management IP.

Additional Tips

Ensure that your computer is on the same subnet as the switch to successfully discover its IP address. If the switch is not responding, it may not have an IP address configured or may be on a different VLAN. In such cases, check the switch's documentation for default IP addresses or reset it to factory settings if necessary.

By following these methods, you should be able to locate the IP address of a switch on your industrial network effectively.

How To Find Switch IP Address

So to summarise, my main goal is to find the settings page of the switch and to do that I've tried scanning the network but none of the devices' addresses seem to be the switch's address.

How do I find the IP address of my NETGEAR fully managed switch?

Access the DHCP server or router in your network and go to the page that lists the DHCP clients to find the IP address that is assigned to the switch. You can also download an IP

How to find the IP Address of the RUCKUS Devices (Switch and APs)

To do this, you'll first need to know their IP addresses, which are like digital home addresses for your devices on your local network. This guide explains step-by-step how to find the IP

How to get ip address of devices connected to switch

We got a few forti switches connected as a test (448E-POE on ver 7.0.4 - no fortigate yet) and i'm trying to find the equivalent of the cisco command: show ip device tracking all

How to find the IP address of Cisco devices connected to a Cisco ...

A Cisco device enabled with CDP sends out periodic interface updates to a multicast address in order to make itself known to neighbors. In a scenario, if you want to manipulate what IP

How can I determine the IP address of my Cisco 2950 switch?

Your switch might even be setup to get an IP from the ISP, but use DHCP. In the very end, and most importantly, document everything (closet location, key access, username/password,

Cisco Switch command to identify the IP address along with the

At a base level, switches don't do IP addresses. The classic way to do this is to get the MAC from the ARP table (wherever that is), and look for that MAC on the switch.
