

Huawei SN series optical modules

Overview

Optical Modules in General-Purpose Computing Scenarios Huawei offers a comprehensive portfolio of pluggable StarryLink optical modules for data center netw.

Key Takeaways

Huawei SN series optical modules are certified transceivers designed for S series switches, supporting a range of speeds from 100M to 800GE with single-mode and multi-mode options.

Huawei SN series optical modules are high-performance transceivers that convert electrical signals to optical signals for network transmission. They are designed specifically for Huawei S series switches and include SFP, eSFP, SFP+, QSFP+, and CSFP form factors . These modules ensure reliable connectivity, long-distance transmission, and compatibility with Huawei-certified switches.

Certification and Compatibility

- **Certified Modules:** Only Huawei-certified optical modules are guaranteed to function correctly with S series switches. Certified modules display "HUAWEI" on the label, and the switch recognizes them in the display transceiver command output .
- **Non-Certified Modules:** Using non-certified modules may cause frequent link up/down issues or incomplete diagnostic information .

- Copper vs Optical: Both copper and optical modules must be certified for proper operation, though the vendor name may show the original manufacturer .

Types and Specifications

- SFP/eSFP Modules: Commonly used for 100M/1G connections. Examples include SFP-FE-SX-MM1310 (multi-mode, 2 km) and eSFP-FE-LX-SM1310 (single-mode, 15 km), .
- SFP+ Modules: Support 10G connections for high-speed links.
- QSFP+ Modules: Used for 40G connections, with careful attention to orientation during installation .
- CSFP and XFP Modules: Provide additional high-speed options for specialized applications .
- Single-Fiber Bidirectional Modules: Allow simultaneous transmission and reception over a single fiber, reducing cabling requirements .

Advanced StarryLink Modules

Huawei's StarryLink optical modules are optimized for data center networks, offering ultra-reliable, long-distance, and secure interconnections. Key features include:

- Short-distance optical return loss positioning for precise fault detection
- Channel loss resistance technology for enhanced reliability
- Exclusive optical path coupling algorithms
- PHYSEC encryption for 100% packet security
- Support for GE to 800GE transmission

Installation and Usage Tips

- Fiber Type Matching: Single-mode modules must use single-mode fiber, and multi-mode modules must use multi-mode fiber .
- Transmission Distance: Ensure the module's rated distance matches the network requirements. Multi-mode modules have shorter distances than single-mode modules .
- Port Configuration: Use commands like `display interface` and `display transceiver interface verbose` to verify module status and optical power levels .
- Stacking and Interconnection: For S5700/S5720 series switches, follow proper stacking and service port connection procedures to avoid link issues .

Summary

Huawei SN series optical modules provide certified, high-performance, and secure optical connectivity for S series switches. They cover a wide range of speeds and distances, with specialized modules for data centers and long-distance interconnects. Proper selection, certification verification, and fiber type matching are essential for optimal performance and reliability .
