

Industrial Switches with Dual Fibers

Overview

Industrial Ethernet Switches Available in all-copper, all-fiber, or mixed-port configurations, these switches can be stacked and used for Industrial Switch.

Key Takeaways

Industrial Ethernet switches with dual fiber ports provide reliable, long-distance, and interference-resistant connectivity for harsh industrial environments.

Industrial switches with dual fiber ports are designed to combine copper Ethernet connectivity with fiber-optic uplinks, enabling stable communication over long distances and in electrically noisy environments. These switches are suitable for factory automation, energy systems, transportation networks, surveillance backbones, and outdoor deployments .

Key Features

- **Port Configuration:** Typically include multiple RJ45 copper ports (10/100/1000 Mbps) for connecting PLCs, HMIs, industrial PCs, and gateways, along with dual fiber ports for uplinks or inter-cabinet links .
- **Fiber Types:** Support for single-mode or multi-mode fiber, with SC, LC, ST, or FC connectors. Dual fiber ports allow simultaneous transmission and reception over separate fibers, enhancing reliability .
- **Management Options:** Available in unmanaged, managed, or fully managed models, allowing flexibility from simple plug-and-play setups to advanced network routing and monitoring .
- **Performance:** Options range from Fast Ethernet (100 Mbps) to Gigabit (1000 Mbps) and even 10G for high-speed industrial networks .

- **Environmental Resilience:** Designed for harsh conditions with IP40/IP67 enclosures, fanless operation, wide temperature ranges (-40°C to 85°C), surge protection, and enhanced EMC performance .

- **Power Supply:** Many models support redundant DC power inputs (e.g., 9–52V) to ensure continuous operation in critical industrial applications .

Deployment Scenarios

- **Edge Aggregation:** Dual fiber ports simplify uplinks between cabinets or across noisy plant areas, supporting star or daisy-chain topologies .

- **Long-Distance Connectivity:** Single-mode dual fiber ports can achieve transmission distances up to 100 km, making them ideal for large industrial campuses or outdoor networks .

- **Outdoor and Harsh Environments:** Ruggedized switches with IP-rated enclosures and lightning protection are suitable for outdoor installations, intelligent traffic systems, and safe city applications .

Example Models

- **NEU1042F:** Unmanaged Fast Ethernet switch with 4 copper ports and 2 fiber ports, fanless IP40 metal housing, enhanced EMC, and wide-range DC input for 24/7 operation .

- **NuFiber NF512G-SC20:** Gigabit unmanaged switch with 2 RJ45 ports and 1 SC dual fiber port, 20 km single-mode transmission, IP40 protection, redundant DC power, and designed for harsh outdoor applications .

Conclusion

Industrial switches with dual fiber ports provide a robust solution for combining copper access with long-distance fiber connectivity, ensuring reliable network performance in harsh industrial and outdoor environments. They offer flexibility in management, fiber type, and deployment topology, making them suitable for a wide range of industrial automation, energy, and transportation applications .
