Intelligent Relay Protection Tester Brands

Overview

Relay testing device Find your relay testing device easily amongst the 102 products from the leading brands (OMICRON, WUHV, Weshine Electric Manufacturer.

Key Takeaways

Top brands for intelligent relay protection testers include OMICRON, Megger, KINGSINE, GFUVE, Phoenix Contact, Schneider Electric, and DEMIKS, each offering specialized solutions for modern power system testing. Leading Brands and Their OfferingsOMICRON Headquartered in Austria, OMICRON is globally recognized for its high-reliability relay testers and advanced technology. Their products include relay testers, primary test systems, and monitoring tools.

OMICRO

N devices are known for comprehensive functionality, excellent technical support, and global presence, though their complexity may require additional user training. Megger Based in the UK, Megger provides the FREJA and SMRT relay test sets, supporting IEC 61850 networks. Their systems integrate software like the Megger GOOSE Configurator (MGC) and Sampled Values Analyser (SVA), enabling fully automated testing without a PC.

Megger emphasizes cybersecurity, asset management, and flexible testing options for substations and relay factories.

KINGSINE KINGSIN

E specializes in portable relay testers for both traditional and digital substations, including IEC 61850-compliant IEDs. Their product line includes mini protection relay testers, CT/PT analyzers, voltage/current amplifiers, and multifunctional power meters.

KINGSIN

E is recognized for cost-effective, high-performance solutions suitable for renewable energy systems and distribution networks.

GFUVE GFUVE GROU

P offers manual and automatic relay testers with six-phase, three-phase, and single-phase configurations. Their devices are designed for maximum efficiency, flexibility, and accuracy, suitable for substation commissioning and factory testing of relays.

DEMIK

S A European manufacturer, DEMIKS provides relay protection testers, secondary injection testers, and advanced testing software. Their products are known for high precision, user-friendly interfaces, and strong customer support, though they are positioned at a premium price point. Phoenix Contact and Schneider Electric These companies offer industrial-grade relay protection solutions that enhance system resilience against voltage fluctuations.

Their products are widely used in power system protection and industrial automation, complementing the testing equipment from specialized relay tester manufacturers. Key Considerations When Choosing a BrandCompatibility: Ensure the tester supports IEC 61850 digital relays and conventional relay types. Portability vs.

Stationary: Portable testers like KINGSINE are ideal for fieldwork, while stationary systems like OMICRON or Megger may suit lab or substation environments. Software Integration: Advanced brands provide automated testing, GOOSE messaging simulation, and asset management software. Support and Training: Complex systems may require technical training and global support networks.

Budget: Premium brands like DEMIKS and OMICRON offer high precision but at higher costs, while KINGSINE and GFUVE provide cost-effective alternatives. These brands represent the most trusted and widely used intelligent relay protection testers in the industry, catering to a range of applications from substation commissioning to renewable energy system testing.
