

Is the positive terminal on the left or right in a DC power supply unit

Overview

Diagram showing positive tip polarity on the left and negative tip polarity on the right. To read diagram: The center positive drawing on the left indicates that the center (also known as the tip) of the output plug is positive (+) and the barrel (ring) of the output plug is negative. The center positive drawing on the left indicates that the center (tip) of the output plug is positive (+) and the barrel of the output plug is negative (-). Symbol for a center-positive power supply. It is always good practice to test. The rating plate on a low-voltage power supply carries a set of standardised symbols and abbreviations that tell you everything critical about that supply: its voltage, current, polarity, waveform type, equipment class, and safety certifications.
