

Malta QSFP Optical Module QSFP-DD

Overview

QSFP-DD is a new module and cage/connector system similar to current QSFP, but with an additional row of contacts providing for an eight lane electrical interface. When combined with higher transmission rates per electrical interface (28 Gbps to 56 Gbps to 112 Gbps), QSFP-DD optical transceivers can. Quad Small Form-Factor Pluggable Double-Density (QSFP-DD) offers twice as many high-speed electrical interfaces as QSFP28 while maintaining the same port density. As a result, significantly higher bandwidth. QSFP-DD offers top-of-the-line bandwidth density and the flexibility of backwards compatibility with lower-speed QSFP pluggable modules and cables, making it one of the most popular choices for high-speed data centers and networks. QSFP-DD extends the use. Pro Tip: In 2025, QSFP112 is gaining traction as a bridge technology. It allows 400G speeds in a native 4-lane configuration, reducing the complexity of breakout cables required by early 400G QSFP-DD (8-lane) implementations.
