

Models and Specifications of Telecommunication Optical Cables

Overview

Our team will make sure the configuration is tailored to your needs and will provide a detailed quote.

Key Takeaways

Telecommunication optical cables are classified by fiber type, core/cladding size, wavelength, and compliance with ITU-T and IEC standards, with models including G.652, G.657, OM1-OM4, and G.654-G.656 for various applications. Fiber Types and Models

Single-mode fibers (SMF) are primarily used for long-distance and high-speed transmission. Common ITU-T models include:

- G.652 (Standard SMF): Optimized for 1310 nm, low water peak, suitable for metropolitan and access networks .
- G.652C/D: Low water peak fibers for CWDM systems, supporting 1310–1625 nm .
- G.657 (Bending-resistant SMF): Designed for FTTH and optical distribution networks, minimizing macro-bending losses .
- G.654, G.655, G.656: Specialized fibers for long-haul, high-capacity, or dispersion-managed networks . Multimode fibers (MMF) are used for shorter distances, such as LANs and data centers:
- OM1 (62.5/125 μm): Legacy applications, LED sources, 850/1300 nm .

- OM2 (50/125 μm): Supports higher bandwidth, LED or VCSEL sources .
- OM3/OM4/OM5 (50/125 μm , laser-optimized): High-speed data, 10–400 Gbps, suitable for VCSEL and laser sources .

Core and Cladding Dimensions

- Single-mode fibers: Core $\sim 8\text{--}10\ \mu\text{m}$, cladding $125\ \mu\text{m}$.
- Multimode fibers: Core $50\text{--}62.5\ \mu\text{m}$, cladding $125\ \mu\text{m}$.
- Outer coatings vary by cable type and environmental requirements .

Wavelength and Transmission

- Single-mode: 1310 nm (low dispersion), 1550 nm (long-haul, low attenuation), 1625 nm (CWDM).
- Multimode: 850 nm and 1300 nm for LED/VCSEL sources .

Cable Specifications

- Mechanical and environmental performance: Tensile strength, crush resistance, temperature range, water-blocking, and UV resistance .
- Attenuation: Typically measured at 1310 nm and 1550 nm for SMF; 850 nm and 1300 nm for MMF .
- Chromatic dispersion: Specified per ITU-T G.65x series, critical for high-speed transmission .
- Standards compliance: ITU-T (G.65x series), IEC 60793, ISO/IEC 11801, TIA/EIA-492, Telcordia GR-20/GR-409 .

Applications

- FTTH and access networks: G.657 fibers, bend-insensitive SMF.
- Metropolitan and long-haul networks: G.652, G.654, G.655 fibers.
- Data centers and LANs: OM3/OM4 multimode fibers for high-speed interconnects .

Summary

Telecommunication optical cables are selected based on fiber type, transmission distance, wavelength, and environmental conditions. Single-mode fibers dominate long-distance and high-speed networks, while multimode fibers are used for shorter, high-bandwidth applications. Compliance with ITU-T, IEC, and Telcordia standards ensures interoperability, reliability, and performance across global networks .
