

North Korea sells optical cables

Overview

Based on this information, Nick predicts that the fiber optic cable from Russia crosses the Tumen River into North Korea, then connects to Pyongyang via the east coast (on the Sea of Japan...

Key Takeaways

North Korea exports small volumes of optical fibers and cables, primarily to countries like Bosnia and Herzegovina, the UAE, and Oman, while maintaining a domestic fiber optic network connecting key cities and international links.

Export Overview

In 2021, North Korea exported \$8,580 worth of optical fibers and cables, ranking it as the 132nd largest exporter globally for this product. The main export destinations were Bosnia and Herzegovina (\$4,400), the United Arab Emirates (\$2,950), and Oman (\$1,240). Despite being a minor player in the global market, these exports indicate North Korea's limited but ongoing participation in international optical cable trade.

Historically, North Korea also imported optical fibers and cables, with imports reaching \$654,000 in 2017, though detailed sources of these imports are not specified.

Domestic Fiber Optic Network

North Korea has developed a domestic fiber optic network connecting major cities and strategic locations. The first fiber optic cable linked Pyongyang to Hamhung in 1995, followed by connections to Sinuiju in 1998, and by 2000, cables extended to Nampo, Rajin-Songpa, and Hunchun (China). The network also includes international connections: a fiber optic cable from Russia crosses the Tumen River into North Korea via the Korea-Russia Friendship Bridge, and additional links exist with China.

Domestically, government ministries and key institutions are connected through the Kwangmyeong intranet, and fiber optic cables often follow railway lines and major roads.

Strategic Implications

North Korea's optical cable infrastructure supports both internal communications and limited international connectivity, while its exports, though modest, reflect a niche presence in the global optical fiber market. The combination of domestic network development and selective exports highlights the country's focus on maintaining secure communications and generating revenue from specialized technology products.

How is North Korea's fiber optic network structured?

Based on this information, Nick predicts that the fiber optic cable from Russia crosses the Tumen River into North Korea, then connects to Pyongyang via the east coast (on the Sea of Japan...

North Korea acquires fiber optic cables

With the support of the UNDP, North Korea's fiber optical cable construction started off by connecting Pyongyang and the regional cities. Now the fiber-optic cable networks expand throughout the nation.

Optical fibres and cables in North Korea

In 2021, North Korea exported \$8.58k in Optical fibres and cables. The main destinations of North Korea exports on Optical fibres and cables were Bosnia and Herzegovina (\$4.4k), United Arab Emirates

Internet in North Korea

The country has some broadband infrastructure, including fiber optic links between major institutions. Online services for most individuals and institutions are provided through a free domestic-only

Telecommunications in North Korea

North Korea's main connection to the international Internet is through a fiber-optic cable connecting Pyongyang with Dandong, China, crossing the China–North Korea border at Sinuiju.

Taihan Fiberoptics

Taihan Fiberoptics supports the easiest and fastest modern communication by developing and supplying optical fiber-based cables and related network products.

Exploring the Quest for North Korean Fiber Optic Cables

North Korea's pursuit of fiber optic cables reflects its struggle with connectivity and modernization, revealing complexities in information control and international dynamics.

In-Depth Analysis of the Plenum Fiber Optic Cables Market ...

The Booming Plenum Fiber Optic Cables Market: A Comprehensive Analysis Market Overview Plenum fiber optic cables are crucial for high-speed data transmission in commercial and
