

Parameters of the 10GSR Optical Module

Overview

The SFP+-10G modules are our latest generation of 10G transceiver modules solution based on a SFP+ form factor.

Key Takeaways

The 10GSR optical module is a 10 Gbps SFP+ short-reach transceiver operating at 850 nm, supporting multimode fiber links up to 300-400 meters with low power consumption and DOM capabilities.

The 10GSR module, also known as 10GBASE-SR SFP+, is designed for short-reach 10 Gigabit Ethernet (10GbE) over multimode fiber (MMF). It uses 850 nm VCSEL laser technology and a duplex LC connector interface, making it suitable for high-density data center and enterprise network deployments. It is compliant with IEEE 802.3ae 10GBASE-SR, SFP+ MSA (SFF-8431/SFF-8432), and supports hot-pluggable operation.

Optical Characteristics

- Wavelength: 850 nm
- Supported Fiber Types: OM3 and OM4 multimode fiber
- Maximum Link Distance:
 - OM3: up to 300 meters
 - OM4: up to 400 meters
- Transmitter Type: Uncooled VCSEL
- Receiver Type: High-sensitivity PIN photodiode

- Optical Power Output: Typically optimized for MMF launch, ensuring BER < 10^{-12} at 10.3125 Gbps
- Electrical Characteristics
- Data Rate: 10.3125 Gbps nominal
- Power Consumption:
