Price of wall-mounted home network server racks

Overview

Discover wall-mounted server cabinets with adjustable rails and cable management. Ideal for data centers, offices, and network closets with limited space.

Key Takeaways

Home wall-mounted server racks typically cost between $100 and $400, depending on size, depth, and features.

Price Range and Factors

Small racks (6U–12U): These compact units, suitable for home labs or small setups, generally cost $100–$200. For example, the SKYSHALO 12U wall-mounted steel server cabinet is priced around $100–$120 and includes a lockable glass door and vented design for airflow. Medium racks (12U–18U): Slightly larger racks with deeper enclosures and additional shelves typically range from $200–$300, offering more space for networking equipment, better ventilation, and sometimes built-in fans.

High-end or specialized racks: Premium wall-mounted racks with reinforced steel, soundproofing, or advanced cooling features can cost $300–$400 or more, depending on brand and additional accessories.

Key Features Affecting Cost

Rack size (U units): Larger racks (e.g., 15U–18U) cost more due to increased material and capacity. Depth and width: Deeper racks accommodate larger servers and networking devices, increasing price. Material and build quality: Steel frames with powder coating or reinforced panels are more expensive than basic metal racks.

Cooling and ventilation: Racks with built-in fans or vented panels help maintain optimal temperatures but add to cost. Security features: Lockable doors, side panels, and cage nuts for mounting equipment can increase price. Included accessories: Shelves, mounting hardware, and cable management kits may be included in higher-priced models.

Retail Options

Amazon: Offers a wide range of wall-mounted racks from budget to mid-range, typically $100–$300. Sysracks: Specializes in home server racks with compact, ventilated designs, priced around $150–$350 depending on size and features. Home Depot: Stocks models like the SKYSHALO 12U cabinet for around $100, suitable for small home setups.

Newegg and eBay: Provide additional options, including refurbished or discounted units, often in the $100–$400 range.

Recommendation

For a home network setup, a 6U–12U wall-mounted rack is usually sufficient unless you plan to scale up significantly. Consider ventilation, security, and depth to ensure your equipment fits and stays cool. Prices are generally affordable, with most home-use racks falling under $200–$300 for a balance of quality and features.
