

Processing of steel trough-type cable trays in Eastern Europe

Overview

Cable Tray Production Line | Roll Forming Machine Our cable tray production line has specially strengthened the high-precision CNC punching process and roll.

Key Takeaways

Steel trough-type cable trays in Eastern Europe are typically manufactured using roll-forming techniques, with options for pre-galvanized, hot-dip galvanized, or stainless steel finishes, conforming to European standards such as BS EN 61537. Manufacturing Methods

Steel trough-type cable trays are commonly produced using roll forming, a continuous bending process that shapes steel sheets into the desired trough profile on automated production lines. Standard tray lengths are usually 3 meters, with 6 meters available upon request, allowing flexibility for industrial installations. The trays are fabricated from mild steel, stainless steel (grade 316L), or pre-galvanized steel, with optional coatings such as epoxy or polyester for enhanced corrosion resistance.

Finishes and Coatings

- Pre-galvanized steel: Steel is coated with zinc before fabrication, suitable for indoor applications.
- Hot-dip galvanized steel: Steel is dipped in molten zinc after fabrication, providing superior corrosion protection for harsh environments.

- Stainless steel (316L): Used for highly corrosive or hygienic environments, often made to order .
- Painted or epoxy-coated finishes: Optional for aesthetic or additional protective requirements .

Standards and Compliance

In Eastern Europe, steel trough-type cable trays generally conform to BS EN 61537, which specifies requirements for cable tray systems and ladder systems, including mechanical strength, load capacity, and installation guidelines . Manufacturers often provide independent testing to verify compliance with these standards.

Accessories and Installation

Cable trays are supplied with a wide range of fittings, covers, and suspension systems to facilitate installation in industrial facilities. Accessories include bends, tees, and shaft hangers, which can be customized to meet site-specific requirements . Tray selection is based on cable type, diameter, weight, and environmental conditions, ensuring proper support and spacing for power, control, and communication cables.

Suppliers and Market

Eastern European suppliers, including voestalpine Metsec and EAE Electric, provide medium and heavy-duty steel trough-type trays with high on-time delivery performance and design support, including CAD drawings and bespoke prototypes . The market for cable trays in Europe is growing steadily, driven by industrial electrification, commercial construction, and organized cable management needs .

Summary

Steel trough-type cable trays in Eastern Europe are high-strength, versatile, and corrosion-resistant, produced via roll forming with multiple material and finish options. Compliance with BS EN 61537 ensures safety and reliability, while a wide range of accessories and custom solutions supports complex industrial installations. Manufacturers provide both standard and bespoke solutions to meet diverse project requirements .
