

# Requirements for spacing between strong and weak current cables in cable trays

## Overview

Cable Tray Installation Rules (NEC 392) – Electrical Trader Generally, standard trays require supports every 6 to 10 feet, while heavy-duty, long-span trays.

## Key Takeaways

Maintain at least 12 inches (300 mm) of separation between power (strong current) and control/signal (weak current) cables on cable trays, or use a physical barrier if closer spacing is necessary. Recommended Separation

Industry standards and NEC guidelines emphasize separating high-power and low-power cables to prevent electromagnetic interference (EMI) and ensure signal integrity. Typically:

- Vertical or horizontal spacing: At least 12 inches (300 mm) between power and control/signal cable trays is recommended .
- Use of dividers: If space constraints prevent the full 12-inch separation, a metal or non-conductive partition can be installed between the cables to reduce EMI .
- Layered arrangement: Power cables are often placed above instrumentation or control cables to minimize interference .

NEC Compliance

According to NEC Article 392:

- Cables rated above 600 volts must be separated from lower-voltage cables by a solid barrier if installed in the same tray .

- Cables rated 600 volts or less can share the same tray without additional separation, provided tray fill and support requirements are met .
- Proper tray fill limits (40% for power cables, 50% for control cables) must be observed to avoid overheating and maintain safe operation .

#### Practical Considerations

- Air gaps for heat dissipation: Power cables generate heat, so maintaining air gaps between trays helps prevent overheating .
- Tray type selection: Ladder trays are preferred for power cables due to better ventilation, while solid-bottom trays may be used for sensitive signal cables to reduce EMI .
- Routing and accessibility: Keep trays straight and avoid unnecessary bends; ensure easy access for maintenance and inspection . By following these spacing guidelines and using dividers when necessary, you can ensure safe, code-compliant installation while minimizing interference between strong and weak current cables.
