

# Snake cable tray bending

## Overview

PON Snake Tray protects and secures fiber cables while maintaining the proper bend radius for optimal cable performance.

## Key Takeaways

Snake Tray cable trays feature a patented hand-bendable design that allows quick, tool-free bends around obstacles, walls, and floors while protecting cables. Hand-Bendable Design

Snake Tray's cable trays are engineered to be hand-bendable, enabling installers to create turns in 10 seconds, compared to 15–20 minutes with traditional wire mesh trays. This design eliminates the need for cutting or specialized tools, significantly reducing labor and installation time. The trays can bend around obstacles, transition from walls to overhead suspension, and move from underfloor to wall risers with ease.

### Bend Radius and Cable Protection

For vertical transitions, Snake Tray offers Waterfalls with a smooth 4-inch bend radius, which prevents cable kinking as cables exit trays into cabinets or drop to lower levels. This ensures a damage-free transition and maintains cable integrity, especially for sensitive data or fiber optic cables.

### Installation Flexibility

Snake Tray's built-in mounting hardware allows for versatile installation:

- Wall mounting without brackets using the 501 Wall Snake Tray.

- Suspension from threaded rods or simple beam clamps for overhead runs .
- Underfloor bends using built-in foot rings for stability .
- Risers and horizontal intersections with 101 and 201 series trays, supporting T and 4-way crossings . The trays are available in multiple materials, including pre-galvanized steel, stainless steel, powder-coated, hot-dipped, and rubberized PVC, allowing selection based on environmental and load requirements .

#### Practical Tips

- Plan bends in advance to minimize unnecessary adjustments.
- Use the built-in mounting rings (Snake Eyes) for secure attachment to threaded rods or beams.
- Maintain the recommended bend radius to prevent cable stress, especially for fiber optic or high-density data cables.
- Combine horizontal and vertical bends to navigate complex pathways efficiently without cutting the tray. Snake Tray's system is designed to reduce labor, material costs, and installation time while providing a flexible, durable solution for cable management in commercial and industrial settings .
