

Supply of flame-retardant optical cables for smart buildings in Palau

Overview

Discover ETK Kablo's fire-resistant fiber optic cables with CPR B2ca rating, designed for fire safety and reliable data in critical infrastructure.

Key Takeaways

Flame-retardant optical fiber cables, including LSZH and fire-resistant types, are available globally and suitable for smart building installations in Palau. Cable Types and Features¹.

LSZ

H Indoor Cables: Low Smoke Zero Halogen (LSZH) cables are designed for indoor use, providing flame retardance and minimal toxic gas emission in case of fire. They are suitable for riser shafts, horizontal runs, and plenum spaces, ensuring compliance with fire safety regulations inside buildings (Corning). ².

Fire-

Resistant Fiber Optic Cables: Products like ETK Kablo's B2ca-classified cables maintain optical signal integrity under extreme heat, with low smoke and zero halogen emissions, making them ideal for critical communication lines in hospitals, data centers, and industrial smart buildings. These cables are certified to FE180 and CPR B2ca standards, ensuring global compliance. ³.

High-

Density Ribbon Cables: ScaleFibre's SmartRIBBON™ flame-retardant cables offer 144F–3456F fiber counts with gel-free dielectric construction, suitable for backbone networks, data centers, and campus installations. They feature LSZH jackets, non-metallic strength members, and water-blocking yarns for durability and fire safety. 4.

Draka Fire

Tuf Cables: These cables comply with IEC 60331-25 and IEC 60332-2-3-24C fire standards, supporting voice alarm systems, fire alarm systems, and public building networks. They are available in OM1, OM3, OM4 multimode, and OS2 singlemode configurations, with 8, 12, or 24 cores.

Supplier Considerations for Palau

Global Manufacturers: Corning, ETK Kablo, Prysmian Draka, and ScaleFibre supply flame-retardant optical cables worldwide. Orders can typically be shipped to Palau through regional distributors or international logistics partners. **Compliance:** Ensure cables meet local building codes and international fire safety standards (IEC, CPR, FE180) for indoor smart building installations.

Deployment: Consider riser-rated vs plenum-rated cables depending on building air-handling spaces, and select LSZH jackets to minimize smoke and toxic gas in emergencies.

Recommendations

For smart buildings in Palau, it is advisable to: Use LSZH or B2ca-certified cables for all indoor backbone and horizontal runs. Choose high-density ribbon cables for data centers or high-capacity networks. Work with authorized distributors of Corning, ETK Kablo, Draka, or ScaleFibre to ensure timely delivery and compliance with fire safety standards.

Verify installation requirements for riser shafts, plenum spaces, and emergency systems to maintain continuous operation during fire events. These options provide reliable, flame-retardant optical cabling suitable for modern smart building infrastructure in Palau, ensuring both safety and high-speed data performance.
