

# Techniques for fixing fiber distribution boxes on communication poles

## Overview

This document provides technical specifications for the aerial installation of fiber optic cable (FOC) networks.

## Key Takeaways

Fiber distribution boxes can be securely mounted on communication poles using specialized brackets, stainless steel bands, and proper cable management to ensure reliable connectivity and easy maintenance.

To install a fiber distribution box on a pole, you will need:

- Pole mount bracket (e.g., YK-SX or similar) for quick attachment and adjustable cable storage
- Stainless steel bands and buckles for securing the box to the pole
- Banding tool or ratchet-strapping tool for tightening the bands
- Slack storage bracket to coil excess fiber cable
- Nylon ties, hammer, and fiber optic drop cables for final adjustments

### Installation Steps

- Prepare the bracket: Adjust the storage bracket to accommodate the fiber slack and tighten screws as needed .
- Attach the box to the pole: Insert stainless steel bands around the pole and the bracket, then secure with buckles using a ratchet tool .

- **Manage cable slack:** Coil the fiber optic cable in the storage compartment, ensuring enough slack for future maintenance or additional connections .
- **Connect fibers:** Use splice trays, patch panels, or pre-terminated connectors inside the distribution box to connect main distribution cables to drop cables .
- **Secure and protect:** Use nylon ties and ensure the box is weather-resistant if installed outdoors .

#### Best Practices

- **Select the right box type:** Outdoor, aerial, or dome-shaped boxes are suitable for pole installations and harsh environments .
- **Plan the route:** Survey poles, obtain permits, and ensure poles are “made ready” for aerial fiber installation .
- **Use ADSS or mini-ADSS cables:** These all-dielectric self-supporting cables are ideal for aerial deployment near power lines .
- **Organize fibers:** Use splice trays and patch panels to prevent tangling and reduce the risk of network downtime .
- **Allow for expansion:** Adjustable brackets and storage compartments help accommodate future network growth or repairs .

#### Types of Aerial Distribution Nodes

- **Small aerial nodes:** Connect up to 6 drop cables, suitable for limited customer connections .
- **Larger aerial nodes:** Support up to 24 drop cables with multiple splice trays and patch panels for FTTH deployments . By following these techniques, fiber distribution boxes can be securely mounted on poles, with organized cable management that ensures network reliability, ease of maintenance, and scalability for future expansions.
