

Tunisian ladder-type cable tray models and specifications

Overview

Ladder Cable Tray Husky Ladder Cable Tray systems consists of two longitudinal side members connected by individual CABLE TRAY, CABLE LADDER, CABLE TRUNKIN.

Key Takeaways

Ladder-type cable trays are available in various materials, widths, and thicknesses, designed to support power and control cables with high structural integrity and ventilation. Construction and Design

Ladder-type cable trays consist of two longitudinal side members connected by transverse rungs, providing open support for cables and allowing air circulation to prevent overheating . The rungs are typically welded or mechanically fastened to the side rails, ensuring maximum structural strength and stability . Some models include Ty-Rap® slots for easy cable fastening and adjustable barrier strips .

Materials

Common materials for ladder trays include:

- Aluminum: Lightweight, corrosion-resistant, suitable for indoor and outdoor use .
- Steel: Standard or hot-dip galvanized for enhanced corrosion protection .
- Stainless Steel (AISI 316): High corrosion resistance, ideal for harsh environments .

- PVC-coated Aluminum or Steel: Provides additional chemical and moisture protection .

Dimensions and Thickness

- Width: 100 mm to 1500 mm, typically in 50 mm increments .
- Height: 50 mm, 70 mm, 100 mm, 120 mm, depending on load requirements .
- Thickness: 3 mm to 8 mm, selected based on support span and loading details .
- Rung spacing: Usually 1" centers for cable tie compatibility .

Surface Treatment

- Pre-galvanized steel: Coated before fabrication, suitable for indoor applications .
- Hot-dip galvanized: Thicker coating for outdoor or industrial environments .
- Bare steel: For indoor use where corrosion is not a concern .

Fittings and Accessories

Ladder trays can be complemented with a variety of fittings to accommodate complex cable routing:

- Elbows (horizontal and vertical)
- Reducers
- Tees and crosses
- Joint connectors and cover clips

Standards and Compliance

Ladder-type cable trays generally conform to:

- ANSI/NFPA 70 (National Electrical Code)
- NEMA VE 1-2017 (Metal Cable Tray Systems)
- ASTM A123 & ISO 1461 for galvanization and corrosion protection

Applications

These trays are suitable for:

- Industrial plants, power generation facilities, and commercial buildings
 - Supporting power, control, and communication cables
 - Environments requiring ventilation and easy cable access for maintenance
- By selecting the appropriate material, width, thickness, and surface treatment, ladder-type cable trays can be tailored to meet the specific requirements of Tunisian electrical installations, ensuring compliance with international standards and long-term durability.
