

Warranty on Enterprise-Grade 400G Optical Router

Overview

A valid proof of purchase and a complete product serial number are required to receive any services guaranteed as part of this limited warranty.

Key Takeaways

Enterprise-grade 400G optical routers typically come with hardware warranties ranging from one year to limited lifetime coverage, with options for extended support and replacement services.

Standard Hardware Warranty

For most enterprise networking vendors, the hardware warranty covers defects in materials and workmanship under normal use. For example, Juniper Networks provides a one-year hardware warranty from the product shipment date, with the option for repair or replacement of defective units. Replacement hardware may be new or refurbished, and delivery is generally within 20 business days, depending on location (Juniper Networks).

Cisco offers similar hardware warranties, often with a 5-year return-for-repair (RFR) option, and provides tools to verify the specific warranty for a product ID.

Limited Lifetime Warranty

Some vendors, such as H3C, offer limited lifetime warranties for certain enterprise products, including high-end switches and WLAN APs. This warranty typically covers the original customer for the life of the product, with a maximum of 5 years in some regions. During this period, H3C provides business-hour remote support and ships replacement parts within 10 business days after RMA confirmation.

Accessories like hot-swappable fans, power supplies, and optical modules usually have a 12-month warranty.

Optical Transceivers and Modules

For 400G optical modules, vendors like Carritech Optics provide a lifetime warranty on transceivers, ensuring replacement in case of defects. This coverage is particularly relevant for hyperscale data centers and telecom operators relying on high-capacity, low-latency connectivity.

Software and Media

Software embedded in the hardware is generally covered for a shorter period. For instance, Juniper warrants the media containing software for 90 days from shipment, with replacement as the sole remedy. Cisco and other vendors may include software support under separate service contracts.

Optional Extended Services

Many vendors offer extended service contracts or premium support plans, which can include: On-site installation or replacement of customer-replaceable units (CRUs) Faster replacement or advance replacement options 24/7 technical support and monitoring Extended coverage beyond the standard warranty period These services are often purchased separately and can be tailored to enterprise requirements.

Key Considerations

Warranty start dates may vary depending on whether the product is purchased new, through a distributor, or as certified pre-owned. Local laws and regional policies may affect warranty terms, so consulting the vendor's local service representatives is recommended. Always verify whether the warranty covers all components, including optical modules, power supplies, and accessories.

In summary, enterprise-grade 400G optical routers are generally covered by 1-year to limited lifetime hardware warranties, with optional extended support and replacement services available. Optical modules often have lifetime coverage, and software warranties are typically shorter, emphasizing the importance of service contracts for comprehensive protection.
