## Key Takeaways

A standard 1. 2-meter (approximately 42U) network cabinet typically weighs between 50 and 80 kilograms when empty.

## Empty Cabinet Weight

Most 1. 2-meter network cabinets, which are commonly 19-inch enclosures, are constructed from welded steel or similar materials. According to Hubbell specifications, network cabinets with full welded steel construction can support static loads up to 2,000 pounds, and empty cabinets of this size generally weigh 50-80 kg depending on the manufacturer and design features such as perforated doors, side panels, and cable management accessories.

Legrand server cabinets of similar height also fall within this weight range.

## Populated Cabinet Weight

The total weight increases significantly when equipment is installed. A fully populated 1. 2-meter cabinet with servers, switches, and PDUs can easily exceed 200-300 kg, depending on the number and type of devices.

It is important to consider the floor load capacity and handling equipment when planning installation.

## Material and Design Considerations

**Steel vs Aluminum:** Steel cabinets are heavier but more robust, while aluminum cabinets are lighter but may have lower load capacity. **Perforated Doors:** Cabinets with perforated front and rear doors for airflow may weigh slightly less than solid-door models. **Accessories:** Cable management trays, casters, and airflow management packages add additional weight.

## Practical Implications

When planning installation or transport, always account for the empty cabinet weight plus the expected equipment load. For a 1.2-meter cabinet, ensure that lifting equipment or trolleys can safely handle up to 300 kg if fully populated.

In summary, a 1.2-meter network cabinet weighs roughly 50-80 kg empty, with the total weight increasing substantially once IT equipment is installed.
