

What optical module does the ONU device use for uplink

Overview

Introduction To Data Transmission Methods In PON NetworksAccordingly, the OLT optical module transmitter on the PON link operates in continuous mode, while.

Key Takeaways

ONUs typically use pluggable SFP or SFP+ optical modules, such as GPON Stick modules, for uplink transmission to the OLT.

Overview of ONU Uplink Modules

Modern ON

Us rely on optical transceiver modules to handle upstream data transmission. These modules convert electrical signals from the ONU into optical signals that travel over the fiber to the OLT, enabling high-speed communication in GPON, EPON, XGS-PON, and NG-PON2 networks. The uplink module is often pluggable, allowing flexibility, easy replacement, and future upgrades.

Common Module TypesSFP/SFP+ Modules: Many ONUs support Small Form-factor Pluggable (SFP) or SFP+ modules for uplink. These modules are standardized, hot-swappable, and compatible with a wide range of networking devices. They provide uplink speeds typically ranging from 1.

25 Gbps (GPON) to 10 Gbps (XGS-PON or NG-PON2) depending on the PON technology.

GPO

Stick Modules: Also called SFP encapsulated PON ONU modules, these compact modules integrate the ONU's PON MAC functionality and adhere to ITU-T G. 984 and OMCI standards. They support uplink speeds of 1.

25 Gbps and downlink speeds up to 2.5 Gbps, and can be directly inserted into SFP slots of routers or switches. They simplify deployment in FTTH, FTTB, and FTTO networks.

Standards and CompatibilityGPON (ITU-T G. 984): Uplink at 1.25 Gbps, downstream at 2.

5 Gbps.

EPO

Stick Modules: Ethernet-native PON with similar SFP-based uplinks. XGS-PON (ITU-T G.

9807): Symmetric 10 Gbps uplink/downlink using SFP+ modules. NG-PON2: WDM-based PON supporting multiple 10 Gbps channels per fiber, also using pluggable optical modules.

Advantages of Pluggable Uplink Modules

Flexibility: Allows ONUs to be upgraded or replaced without changing the entire device. **Hot-swappable:** Modules can be installed or replaced without powering down the ONU. **Interoperability:** Compliant with OMCI and ITU-T standards, ensuring compatibility with different OLTs and network architectures.

Space-saving: Compact SFP form factor fits directly into routers or switches, reducing hardware footprint. In summary, the uplink of an ONU device is typically handled by a pluggable SFP or SFP+ optical module, such as a GPON Stick module, which converts electrical signals to optical signals for transmission to the OLT. These modules support standardized PON speeds, are hot-swappable, and provide flexibility for network upgrades and maintenance.
