

What router should I buy for a 50Mbps fiber optic connection

Overview

10 The Best Router For 50 Mbps Speed We've Tested 2026 | SHRWhether you're streaming HD content, gaming, or simply browsing the web, we've curated a select.

Key Takeaways

For a 50 Mbps fiber connection, a dual-band Wi-Fi 5 or Wi-Fi 6 router with good coverage and at least 4 LAN ports is ideal.

Key Considerations

Speed Compatibility: A 50 Mbps connection does not require a high-end multi-gig router. Even entry-level Wi-Fi 5 (802. 11ac) or Wi-Fi 6 (802.

11ax) routers can easily handle this speed without bottlenecks.

Dual-

Band Support: A dual-band router (2. 4 GHz and 5 GHz) is recommended. The 2.

4 GHz band offers better range, while the 5 GHz band provides faster speeds and less interference, which is useful for HD streaming, gaming, or multiple devices. Coverage and Range: Choose a router that matches your home size. For small to medium homes, a single router with strong coverage is sufficient.

For larger homes, consider mesh systems to avoid dead zones.

LA

N Ports: At least 4 Ethernet ports are recommended for wired devices like desktops, smart TVs, or gaming consoles. This ensures stable connections for devices that require consistent bandwidth.

Future-

Proofing: Even though your current plan is 50 Mbps, investing in a Wi-Fi 6 router can provide better performance, lower latency, and support for future upgrades without needing a new router. Recommended Routers TP-Link Archer AX21 (AX1800) – A Wi-Fi 6 dual-band router delivering up to 1.8 Gbps combined speed, with OFDMA and MU-MIMO for multiple devices, Beamforming for better coverage, and easy setup via the TP-Link Tether app.

TP-Link Archer AX55 – A budget-friendly Wi-Fi 6 router offering reliable performance, suitable for small to medium homes, and capable of handling multiple devices efficiently. Netgear Nighthawk RS700S – A high-end Wi-Fi 7 router, more than sufficient for 50 Mbps, offering excellent range, multiple LAN ports, and advanced security features. This is ideal if you plan to upgrade your internet speed in the future.

Summary

For a 50 Mbps fiber connection, a dual-band Wi-Fi 5 or Wi-Fi 6 router with good coverage and at least 4 LAN ports is sufficient. TP-Link's AX21 or AX55 models provide excellent value and performance, while the Netgear Nighthawk RS700S is a premium option for future-proofing. Focus on coverage, dual-band support, and device handling rather than ultra-high speeds, as 50 Mbps is easily supported by most modern routers.
